

## Living Environment Regents Review State Lab: Beaks of Finches

### Round 1:

- Feed alone on island with small seeds.
- Feed average of 13 seeds per trial to stay
- If not, migrate to island with large seeds.

### Round 2:

- Some competition
- Feed with one other bird who eats the same size seeds as you

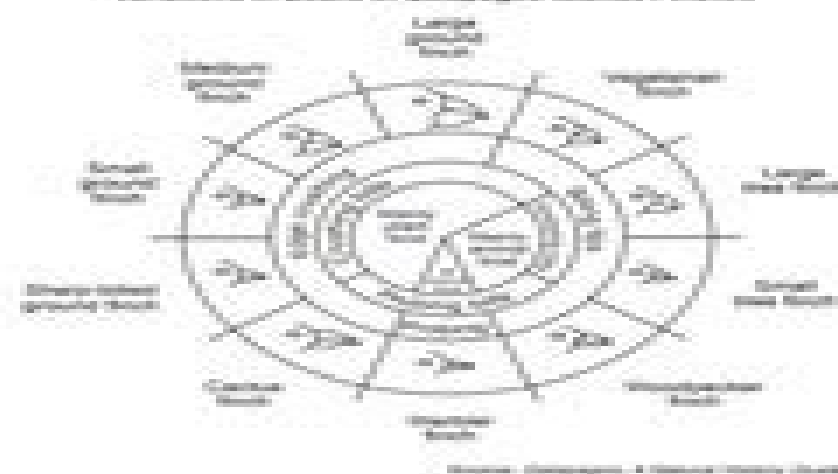

### Round 3:

- Increased competition
- Feed with all birds who eat the same size seeds as you

### Key Ideas:

- Differences: differences among organisms (different types of beaks and seeds in the lab)
  - Sources of variation: sexual reproduction and mutations
- Competition: fight for limited resources (more than one bird feeding at a time)
- Survival: birds needed to get enough seeds to survive (13 or more seeds)
- Adaptation: beneficial trait that helps an organism survive (characteristics of beaks like having a good grip)
- Natural Selection: something that influences the survival of a species (size of the seeds, types of beaks)

Variations in Beaks of Galapagos Islands Finches

Birds with similar beaks and food sources are more likely to compete with one another. They are also more likely to be closely related.

The Finches all evolved from a single ancestor species. They began to fill different available niches and eventually became different species.

What species is most likely to compete with the vegetarian finch? Why?
