Beauty Christiane Nusslein-Volhard, 2019-05-14 An illustrated exploration of colors and patterns in the animal kingdom: what they communicate and how they function in the social life of animals. Are animals able to appreciate what humans refer to as beauty? The term scarcely ever appears nowadays in a scientific description of living things, but we humans may nonetheless find the colors, patterns and songs of animals to be beautiful in apparently the same way that we see beauty in works of art. In *Animal Beauty*, Nobel Prize winning biologist Christiane Nusslein-Volhard describes how the colors and patterns displayed by animals arise, what they communicate and how they function in the social life of animals. Watercolor drawings illustrate these amazing instances of animal beauty. Darwin addressed the topic of ornament in his 1871 book *The Descent of Man and Selection in Relation to Sex* and did not hesitate to engage with criteria of beauty, convinced that animals experienced color and ornament as attractive and agreeable in the same way that we do, and that the role this played in mate choice pointed to a sexual selection distinct from natural selection. Nusslein-Volhard examines key examples of ornament and sexual selection in the animal kingdom and lays the groundwork for biological aesthetics. Noting that color patterns have not been a research priority, perhaps because they appeared to be nonessential luxuries rather than functional necessities, Nusslein-Volhard looks at recent scientific developments on the topic. In part because of Nusslein-Volhard's own research on the zebrafish, it is now possible to decipher the molecular genetic mechanisms that lead to production of colors in animal skin and its appendages and control its pattern and distribution.
