Condition-Based Maintenance in Aviation Ravi Rajamani, 2018-12-11 Condition Based Maintenance in Aviation The History The Business and The Technology describes the history and practice of Condition Based Maintenance CBM systems by showcasing ten technical papers from the archives of SAE International stretching from the dawn of the jet age down to the present times By scientifically understanding how different components degrade during

operations it is possible to schedule inspections repairs and overhauls at appropriate intervals so that any incipient failure can be detected well in advance Today this includes more sensors and analytics so that periodic inspections are replaced by automated continuous inspections and analytical methods that detect imminent failures and predict degradation issues more economically and efficiently Similar concepts are also being developed for delivering prognostics functions such as tracking of remaining useful life RUL of life limited parts in aircraft engines The discipline within CBM that deals with this is called prognostics and health management PHM which covers all aspects of diagnostics and prognostics including modeling of systems and subsystems sensing data transmission storage and retrieval analytical methods and decision making Traditionally nondestructive testing NDT methods have been employed during the major airplane checks to assess structural damage These techniques are enhanced with in situ sensing techniques that can continuously monitor aircraft structures and report on their health The move to condition based assessment of maintenance needs to be balanced by the assurance that safety is not compromised that initial cost of new equipment is amortized by the savings and that regulatory authorities are on board with any modifications to the planned maintenance schedule The trend is clearly to include more CBM functions into Maintenance Repair and Overhaul MRO processes so better cost control can be achieved without ever comprising passenger safety

Unsettled Issues Concerning Integrated Vehicle Health Management Systems and Maintenance Credits
Ravi Rajamani, 2020-05-27 The holy grail for prognostics and health management PHM professionals in the aviation sector is to have integrated vehicle health management IVHM systems incorporated into standard aircraft maintenance policies Such a change from current aerospace industry practices would lend credibility to this field by validating its claims of reducing repair and maintenance costs and hence the overall cost of ownership of the asset Ultimately more widespread use of advanced PHM techniques will have a positive impact on safety and for some cases might even allow aircraft designers to reduce the weight of components because the uncertainty associated with estimating their predicted useful life can be reduced We will discuss how standard maintenance procedures are developed who the various stakeholders are and based on this understanding outline how new PHM systems can gain the required approval to be included in these standard practices There have been a few limited successes in this field already and we will discuss the lessons learned in developing these systems Finally we will review the progress that the structural health management SHM community has made and continues to make to change the way the industry regards automated SHM systems NOTE SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues SAE EDGE Research Reports are not intended to resolve the issues they identify or close any topic to further scrutiny Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2020006>
