Extract B (lines 3-4) states that 'the higher-rate threshold will rise again to £50,000 by the end of the 2020 parliament'.

With the help of a diagram, explain how the increase in the higher-rate income tax threshold could affect the supply of labour.

[9 marks]

Example model answer:

A higher-rate income tax threshold refers to the income level at which a person moves to a higher rate of income taxation. (Kn) The supply of labour refers to the total hours that workers are willing to work in an industry at a given real wage rate. (Kn)

An increase in the higher-rate income tax threshold would increase disposable income for all higher rate income tax payers. (Ap) This would lead to a reduction in the opportunity cost of leisure time, which will explain the increase in labour supply with an increase in disposable income. (Ap, An) This can be illustrated in the diagram below. (Kn, Ap)

In this labour market diagram there is an initial equilibrium at E_1 . (Ap) An increase in the higher-rate income tax threshold would lead to an increase in the supply of labour represented by the shift in the labour supply curve from LS_1 to LS_2 . (Ap, An) A new equilibrium will be established at E_2 with an increase in the quantity of labour supplied. (An) There will also be a reduction in the equilibrium wage rate in the market from W_1 to W_2 . (An)
