Genetic Engineering and Ethics

AIM: How can genetic engineering impact human well-being and society?

Why?

DNA contains the information living things need to make proteins. The genes within DNA contain enough information to produce proteins. The "language" of DNA is universal, so the same DNA sequence in different organisms will create the same protein. Genetic engineering allows us to modify organisms DNA, allowing us to also modify the proteins they create.

Model 1: Genetic Engineering:

1. What gene was removed from the human cell?
2. What was the name of the small, circular dna molecule taken from the bacteria cell?
3. How is the "Transgenic Bacteria" different from the original bacteria?
