

Question 1:

Draw the common tangents of the circles and tell how many tangents there are.

Question 2:

If AB is tangent to the circle, find x .

Solution 2:

Since line AB is tangent to the circle, it forms a perpendicular to the radius AC . A right angle triangle is formed. So, we can use Pythagoras's theorem.

$$AB^2 + AC^2 = CB^2$$

Note that the measure of CB is not entirely marked on the figure (we need to account for the radius of the circle that is not marked). So, $CB = CD + x$.

$$x^2 + 6^2 = (x + 6)^2$$

$$x^2 + 36 = x^2 + 12x + 36$$

Cancel what is common

$$x^2 + 36 = x^2 + 12x + 36$$

$$x^2 + 36 = x^2 + 12x + 36$$

Subtract x^2 and 36 from both sides

$$0 = 12x$$

Subtract $12x$ from both sides

$$x = 0$$

Divide by 12 and both sides

Question 3:

Given that A , B , C are points of tangency, find BC .

Solution 3:

By Tangent-Tangent Congruence Theorem, $AC = BC$.

$$2x + 4 = 3x$$

$$x^2 - 3 = x$$

Subtract 4 from both sides by 4

$$x^2 - x - 3 = 0$$

is a quadratic equation

$$x^2 - x - 3 = 0$$

Subtract x^2 from both sides

$$-x - 3 = 0$$

Divide by -1

$$x = 3$$

Since x is a length, it cannot be negative. Therefore, $x = 3$.

$$BC = 3x$$

$$BC = 9$$

$$BC = 9$$

Question 4:

Is it possible for two tangent lines to the same circle to never intersect? Why or why not?

Solution 4:

Yes. The two tangents of the same circle may never intersect if they are parallel. This happens when they are on opposite ends of the circle.

Geometry Howard Franklin Fehr, Walter H. Carnahan, 1961 Plane Geometry Mabel Sykes, Clarence Elmer Comstock, 1918 *Geometry: The Line and the Circle* Maureen T. Carroll, Elyn

Rykken, 2018-12-20 *Geometry The Line and the Circle* is an undergraduate text with a strong narrative that is written at the appropriate level of rigor for an upper level survey or axiomatic course in geometry Starting with Euclid's *Elements* the book connects topics in Euclidean and non Euclidean geometry in an intentional and meaningful way with historical context The line and the circle are the principal characters driving the narrative In every geometry considered which include spherical hyperbolic and taxicab as well as finite affine and projective geometries these two objects are analyzed and highlighted Along the way the reader contemplates fundamental questions such as What is a straight line What does parallel mean What is distance What is area There is a strong focus on axiomatic structures throughout the text While Euclid is a constant inspiration and the *Elements* is repeatedly revisited with substantial coverage of Books I II III IV and VI non Euclidean geometries are introduced very early to give the reader perspective on questions of axiomatics Rounding out the thorough coverage of axiomatics are concluding chapters on transformations and constructibility The book is compulsively readable with great attention paid to the historical narrative and hundreds of attractive problems Practical Geometry and Engineering Graphics William Abbott, 1929 College Geometry with GeoGebra Barbara E. Reynolds, William E.

Fenton, 2021-01-20 From two authors who embrace technology in the classroom and value the role of collaborative learning comes *College Geometry Using GeoGebra* a book that is ideal for geometry courses for both mathematics and math education majors The book's discovery based approach guides students to explore geometric worlds through computer based activities enabling students to make observations develop conjectures and write mathematical proofs This unique textbook helps students understand the underlying concepts of geometry while learning to use GeoGebra software constructing various geometric figures and investigating their properties relationships and interactions The text allows students to gradually build

upon their knowledge as they move from fundamental concepts of circle and triangle geometry to more advanced topics such as isometries and matrices symmetry in the plane and hyperbolic and projective geometry Emphasizing active collaborative learning the text contains numerous fully integrated computer lab activities that visualize difficult geometric concepts and facilitate both small group and whole class discussions Each chapter begins with engaging activities that draw students into the subject matter followed by detailed discussions that solidify the student conjectures made in the activities and exercises that test comprehension of the material Written to support students and instructors in active learning classrooms that incorporate computer technology College Geometry with GeoGebra is an ideal resource for geometry courses for both mathematics and math education majors

Geometry by Its Transformations Christopher Baltus, 2025-02-07 This textbook combines the history of synthetic geometry centered on the years 1800 1855 with a theorem proof exposition of the geometry developed in those years The book starts with the background needed from Euclid's Elements followed by chapters on transformations including dilation similitude homology homogeneous coordinates projective geometry inversion the Möbius transformation and transformation geometry as in French schoolbooks of 1910 Projective geometry is presented by tracing its path through the work of J V Poncelet J Steiner and K G C von Staudt Extensive exercises are included many from the period studied The prerequisites for approaching this course are knowledge of high school geometry and enthusiasm for mathematical demonstration This textbook is ideal for a college geometry course for self study or as preparation for the study of modern geometry

The Ladies' Repository, 1859 The idea of this women's magazine originated with Samuel Williams a Cincinnati Methodist who thought that Christian women needed a magazine less worldly than Godey's Lady's Book and Snowden's Lady's Companion. Written largely by ministers this exceptionally well printed little magazine contained well written essays of a moral character plenty of poetry articles on historical and scientific matters and book reviews. Among western writers were Alice Cary who contributed over a hundred sketches and poems her sister Phoebe Cary Otway Curry Moncure D Conway and Joshua R Giddings and New England contributors included Mrs Lydia Sigourney Hannah F Gould and Julia C R Dorr. By 1851 each issue published a peice of music and two steel plates usually landscapes or portraits. When Davis E Clark took over the editorship in 1853 the magazine became brighter and attained a circulation of 40 000. Unlike his predecessors Clark included fictional pieces and made the Repository a magazine for the whole family. After the war it began to decline and in 1876 was replaced by the National Repository. The Ladies Repository was an excellent representative of the Methodist mind and heart. Its essays sketches and poems its good steel engravings and its moral tone gave it a charm all its own.
