

Differences between the NSC Mathematics exam and the MAT tests

- One difference between the MAT tests and the NSC Mathematics papers is that questions in the MAT tests do not cue the writers in any way.
- No indication is given (for example by the fact that a question occurs in Paper 1 or in Paper 2) as to whether a question should be dealt with using geometrical or algebraic reasoning, by applying trigonometric principles, or by a combination of these. The fact that mathematics often requires learners to integrate many different skills and concepts in any given problem means that individual questions will assess across a range of mathematical competencies. For example, a question dealing with the graphical representation of a function may also assess spatial and algebraic competence. This means that writers must have a deep understanding of mathematics, and know what reasoning is appropriate in a given context; they will need these skills in Higher Education.

Principles for preparation and proactive teaching

Dealing with multiple choice questions

Unless multiple choice questions are used in the classroom, it might be helpful to give learners some guidelines regarding how to deal with tests in this format. The best way to tackle multiple choice questions in a mathematics paper is the following:

- Read the question very carefully without looking at any of the possible options.
- Try to work out the question before looking at any of the possible options.
- Look at the options and see whether one of them corresponds to the answer that has been obtained, in which case select that option. **But** be critical of the reasoning involved, in case the answer reflects a specific misconception, as in the following example:

$$\sqrt{9x^2 + 16x^2} \text{ is equal to } \quad (\text{A}) \ 5x \quad (\text{B}) \ 7x \quad (\text{C}) \ \pm 5x \quad (\text{D}) \ \pm 7x$$

Working out the question before looking at the answers, and being aware of the misconceptions that (a) the square root of a sum is not equal to the sum of the square roots, and (b) 'square root' is by definition positive, should help writers make the correct choice.

- If none of the answers corresponds to the answer that has been found, start the question over, and try once more. If none of the options is then found, leave the question for later and move on. All questions have one correct option – this has been checked beforehand, and writers need not worry that there may be a mistake in the question.
