## PACING GUIDE

AP Environmental Science is a college-level course that prepares students for the AP Environmental Science exam. The course is designed to be completed over the course of one year, with a pacing guide that outlines the topics and concepts to be covered.

The pacing guide is divided into four main sections: **Unit 1: Ecology**, **Unit 2: Evolution**, **Unit 3: Biodiversity**, and **Unit 4: Environmental Science**. Each section contains a list of topics and concepts, along with a suggested timeline for when they should be covered.

The pacing guide is a flexible tool that can be adapted to fit the needs of your classroom. It provides a general overview of the course content, but it is up to you to determine the specific topics and concepts to be covered, and the order in which they should be taught.

### Unit 1: Ecology

**Topics and Concepts:**

- Ecology: the study of the interactions between organisms and their environment
- Population ecology: the study of the dynamics of populations of organisms
- Community ecology: the study of the interactions between different species within a community
- Biome: a large-scale community of organisms, characterized by a specific climate and a distinct set of organisms
- Ecosystem: a community of organisms and their physical environment, functioning as a unit
- Energy flow: the movement of energy through an ecosystem
- Material cycling: the movement of matter through an ecosystem
- Succession: the process of change in the composition of a community over time
- Disturbance: an event that disrupts a community, such as a fire or a flood
- Conservation: the protection of natural resources and the environment

**Suggested Timeline:**

### Unit 2: Evolution

**Topics and Concepts:**

- Evolution: the change in the heritable characteristics of a population over time
- Speciation: the process by which new species are formed
- Adaptation: a trait that increases an organism's fitness
- Natural selection: the process by which organisms with favorable traits are more likely to survive and reproduce
- Genetic drift: a random change in the frequency of alleles in a population
- Gene flow: the movement of genes between populations
