context Clinical Psychometrics can be considered as an essential tool in many fields of research related to psychological and psychiatric interventions for example it is useful for diagnostic assessment in various fields including clinical and forensic areas for the design and evaluation of specific psychological and pharmacological treatments Therefore Clinical Psychometrics is an applied discipline using psychometric tools to develop evidence based type procedures relating to the understanding and improvement of the psychological conditions of individuals This Research Topic on Clinical Psychometrics is interested in several aspects of measurement of psychological variables focusing on the two fundamental paradigmatic aspects of the discipline the Classical Test Theory and the Item Response Theory This Research Topic seeks to stimulate a scientific debate between psychotherapists and psychometricians in this area It could have applicative fallouts such as designing trans cultural studies in order to 1 investigate the invariance of new instruments for measuring clinical variables 2 test the invariance of existing instruments used in clinical research 3 develop more refined measure instruments for the evaluation of clinical dimensions similarly to work conducted by the Obsessive Compulsive Cognitions Working Group in identifying domains considered central to OCD and developing the 87 item Obsessive Beliefs Questionnaire 4 evaluate therapeutic outcomes and processes such as states stress psychological distress psychological adjustment to illness health related quality of life mood disorders sexual functioning etc The goal of this Research Topic is to disseminate a culture of integration between psychometric model and clinical model promoting the scientific debate about the deepening of the existing methods and or the proposal of new methods capable of combining clinical significance with quantitative rigor This Research Topic welcomed all types of articles with the exception of case reports We were particularly interested in 1 Systematic reviews shedding new lights on the psychometric properties of the most used psychological measures in clinical psychology neuroscience psychiatry psychosomatics etc 2 Guidelines and suggestions on the correct use and gold standards in psychological assessment in the form of research studies and brief reports on the development of new measures and adaptation of existing ones

Behavioral and Medical Comorbidity: Identifying Challenges and Transforming Systems of Care M. Barton Laws, Brandon Gaudiano, Ronald Seifer, 2025-08-21 Prevalence of medical comorbidity is much higher for people with serious mental illness than it is for the general population People with mental illness die 14 to 18 years prematurely largely due to common causes of death including cerebrovascular disease diabetes and cancer For instance behavioral health disorders are the leading cause of disease burden in the U S There has been a historic separation between the systems which address behavioral health and the medical care system which addresses other health issues These systems differ in organization and financing and are represented by separate institutions and different professions In addition behavioral disorders are frequently criminalized rather than receiving treatment sufferers are incarcerated Effective medical management social support and patient experience are greatly enhanced when behavioral health primary care and other medical services are integrated with the healthcare system in the U S for example which is just beginning to make progress
