Abstract—The purpose of this study was to determine if there were differences in the prevalence of musculoskeletal disorders between two groups of nurses working in different units of a tertiary care hospital. The study included 100 nurses from the medical-surgical unit and 100 nurses from the intensive care unit. Data were collected by means of a self-administered questionnaire. Results showed that the prevalence of musculoskeletal disorders was higher among nurses from the intensive care unit than among nurses from the medical-surgical unit. The most prevalent disorder was low back pain, followed by neck pain and shoulder pain.
