**Overlap of Neural Systems for Processing Language and Music** McNeel Gordon Jantzen, Edward W. Large, Cyrille Magne, 2016-07-29 The interplay between musical training and speech perception continues to intrigue researchers in the areas of language and music alike Historically language function has been attributed to brain regions localized predominately in left hemisphere whereas music has been attributed to right hemisphere dominant regions Recent studies demonstrating neural overlap for processing speech and music and enhanced speech perception and production in musicians suggest that these regions may be inextricably intertwined The extent of neural overlap between music and speech remains hotly debated with surprisingly little empirical research exploring specific neural homologs and analogs Moreover despite recognition that shared processes likely exist throughout development and depend upon an individual s acoustic experiences even less research exists on how overlapping neural structures for music and language are affected by developmental trajectories Nonetheless the field is well poised to address key empirical questions in part because of the recent development of new theories that address the neural and developmental interaction between music and language processing in conjunction with the broad availability of sophisticated tools for quantifying brain activity and dynamics To understand the overlap of neural structures for language and music processing research is needed to identify those specific functions of each that influence the other with areas for enhanced perception of pitch and onset time having already been targeted Research is also needed to identify the extent to which this overlap is developed in infancy or early childhood and the process by which it affects neural reorganization plasticity and trainability in adulthood For this research topic we would like to further explore the relationship between language and

music in the brain from two perspectives 1 understanding the nature of shared neural and cognitive processing for music and language and 2 understanding the developmental trajectory of these neural systems and how they are influenced by experience We seek to gather technically diverse original research articles that present new empirical findings relevant to understanding 1 When in the brain acoustic information becomes processed specifically as language or music The shared and independent neural structures for processing music and language 3 How acoustic experiences such as musical training influence overlap of neural structures for language and music 4 How the overlap of processing regions changes over time due to experiences at any developmental stage      English Language Learners: Janette Klingner, Amy Eppollito, 2014-01-01 This unique guide for special education teachers teachers of English language learners and other practitioners provides the foundational information needed to determine whether the language difficulties experienced by English language learners ELLs result from the processes and stages of learning a second language or from a learning disability LD The book addresses the following critical factors in detail determining whether an ELL s struggles with reading in English are due to LD or language acquisition characteristics of language acquisition that can mirror LD different types of ELLs and why these differences are important considering a student s opportunity to learn when determining whether he or she may have LD common misconceptions and realities about ELLs and the second language acquisition process ways that learning to read in English as a second or additional language differ from learning to read English as a first language and how the differences can be confusing for ELLs how schools can establish structure to facilitate the process of distinguishing between language acquisition and LD how families are involved in the process guidelines for determining which ELLs should be referred for evaluation and what it means to use an ecological framework to determine whether ELLs have LD      *Structured Literacy* Jacquelyn Chovanes, Emily Sharp, 2025-03-04 This book follows the explicit instructional sequence noted by educational researchers as the most effective means of teaching students new skills and content It begins by offering a rationale for why students should be interested in learning about structured literacy and how they can use it in their teaching practice It provides background knowledge needed to contextualize the book s content Then it takes learners step by step through the process of assessing students and creating effective structured literacy instructional routines Detailed information about how to implement structured literacy instruction and intervention at all three tiers is provided This textbook will be a unique and valuable addition to the extant literature because thus far no book has approached the topic in this way There are books about structured literacy that include examples of learning activities Spear Swerling et al 2021 but there is no single comprehensive textbook that can be readily picked up and used by college instructors and their students This book is not a compendium of the research nor is it a program with scripted lessons It is a comprehensive textbook that uniquely provides the background information on structured literacy and the methods related content needed to successfully prepare preservice teachers to assess plan and implement structured literacy instruction and intervention The book is designed to be

used in the context of a college level one or two semester undergraduate or graduate literacy course Currently no similar textbook exists This book defines structured literacy describes the history of reading research and the science of reading Then the book provides explicit information about how students learn to read and the most effective methods and strategies teachers can use to teach reading to all students Next the book provides detailed and specific instruction in specific structured literacy practices to use at Tiers 1 and 2 Intensive assessment diagnostic and instructional strategies for learners who require individualized Tier 3 intervention are thoroughly explained Many detailed examples of specific instructional routines and corrective procedures are included along with reproducibles that support lesson planning implementation and assessment At the end of each chapter discussion questions and suggestions for hands on learning activities are provided Preparing pre service teachers in the whys and hows of structured literacy instruction and intervention allows them to teach reading effectively according to current understanding of the science of reading Teachers prepared with this knowledge base will be able to use the resources in this book to create additional materials and adapt materials from any literacy program to individualize instruction according to the needs of their students This book will be a valuable addition to any college level general or special education reading methods course The instructional routines taught in the book are designed to be accessible to students with and without disabilities Effective reading instruction such as the kind described in this book increases educational equity for students of color and English learners Suggestions for differentiating instruction based upon individual student needs are provided
