10. **What happens if the engine stalls?**
 "If there is a significant increase in the engine power"
 The lift-off system is designed to prevent engine damage caused by an uncontrolled increase of air in the combustion. Before the lift-off, the two combustion air valves close a valve form, and the lift-off system will prevent the engine from starting.
 If the engine will not start, check the engine oil level (see page 15) before attempting to start again.
