

TROUBLESHOOTING

PROBLEM	SOLUTION	PROBLEM	SOLUTION
WIRELESS WIRE DOES NOT WORK	When the WIRELESS WIRE light flashes, check all electrical plugs to make sure that they are properly grounded. Flashing may also be caused by incorrect wiring polarity of the wall outlet (ie. the "hot" and "neutral" wires reversed). NOTE: It is essential for the light to flash if the bed is connected to an isolated AC power source.	REMOTE CONTROLS DO NOT FUNCTION	If the Remote Controls are not functioning, ensure the power cord is plugged in and make sure that the controls of the Nurse Control Panel are not locked out. Also, check the SideCom-connectors located on the bed frame below the mattress deck, to ensure that it is properly plugged into the mating connector. NOTE: The REMOTE Controls can also be locked out if the bed is in the Prevention or Pressure Relief mode or if the Sleep Surface Heater is turned off at the Nurse Control Panel.
WALL CONTROLS DO NOT FUNCTION	If the Wall Control on the outside of the Bedside is not functioning and it is not locked out of the Nurse Control Panel, depress the functionality and Release functionality buttons to see if these functions have been completely changed.
