History Of Mathematics Victor Katz 3rd Edition:

The History of Mathematics Victor J. Katz, 2003 Katz's text *A History of Mathematics: An Introduction* was originally published in 1993. This briefer version allows time enough to address 20th century topics before a one semester course is over. Biographical and ethnomathematics coverage have been cut and recent discoveries have been included. A working knowledge of one year of calculus is enough background for most of the book although the later chapters are a bit more demanding. Katz is affiliated with the U of the District of Columbia. The Golden Age of Data Visualization Kim Marriott, 2024-09-04 We are living in the Golden Age of Data Visualization. The COVID 19 pandemic has demonstrated how we increasingly use data visualizations to make sense of the world. Business analysts fill their presentations with charts, journalists use infographics to engage their readers, we rely on the dials and gauges on our household appliances and we use mapping apps on our smartphones to find our way. This book explains how and why this has happened. It details the evolution of information graphics, the kinds of graphics at the core of data visualization: maps, diagrams, charts, scientific and medical images from prehistory to the present day. It explains how the cultural context, production and presentation technologies and data availability have shaped the history of data visualization. It considers the perceptual and cognitive reasons why data visualization is so effective and explores the little known world of tactile graphics, raised line drawings used by people who are blind. The book also investigates the way visualization has shaped our modern world. The European Renaissance and the Scientific Revolution relied on maps and technical and scientific drawings and graphics influence how we think about abstract concepts like time and social connection. This book is written for data visualization researchers and professionals and anyone interested in data visualization and the way we use graphics to understand and think about the world

Rethinking the Needham Question Raymond W. K. Lau, 2024-12-24 This book offers a new investigation of the Needham Question Why did modern science emerge in Europe but not in any of the advanced non European civilizations Eurocentric accounts attribute it to certain qualities said to be unique to Europe Opposed to the Eurocentric view is a position known as the dialogical perspective Dialogism argues that Europe borrowed heavily from non European scientific knowledges and that scientific exchanges were key to the development of modern science Neo Eurocentric arguments have emerged in response to the challenge of dialogism and the debate between Eurocentrism neo Eurocentrism and dialogism currently stands at a stalemate In this book Raymond Lau brings a new theoretical methodological framework to finally settle this debate The historical analysis developed here shows that to secure the non Eurocentric case and decisively rebut Eurocentrism and neo Eurocentrism it is necessary to go beyond dialogism both theoretically and methodologically
