

HP DesignJet printers – Updating HP Software to Support OS X 10.7 Lion

100

While these evidence of bias in $\hat{\beta}_{OLS}$ are not surprising, applying our distance and efficiency biases method and the resulting $\hat{\beta}_{DSE}$ seems to work a lot better in this case.

Figure 1 (see legend on previous page.)
 This figure shows the results of the analysis of the data from the 1997-1998 survey. The figure is a line graph showing the percentage of respondents who reported using a condom during the last sexual intercourse, by age group and gender. The x-axis represents age groups (15-19, 20-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, 60-64, 65-69, 70-74, 75-79, 80-84, 85-89, 90-94, 95-99). The y-axis represents the percentage of respondents (0-100%). The legend indicates that the solid line represents males and the dashed line represents females. The graph shows that the percentage of respondents using a condom increases with age, with a significant increase in the 20-24 age group. The percentage of respondents using a condom is generally higher for males than for females, except in the 20-24 age group where the percentage is higher for females.
