cars are no longer in the realm of science fiction thanks to the integration of numerous automotive technologies that have matured over many years. Technologies such as adaptive cruise control, forward collision warning, lane departure warning and V2V V2I communications are being merged into one complex system. The papers in this compendium were carefully selected to bring the reader up to date on successful demonstrations of autonomous vehicles, ongoing projects and what the future may hold for this technology. It is divided into three sections: overview, major design and test collaborations, and a sampling of autonomous vehicle research projects. The comprehensive overview paper covers the current state of autonomous vehicle research and development as well as obstacles to overcome and a possible roadmap for major new technology developments and collaborative relationships. The section on major design and test collaborations covers Sartre, DARPA contests and the USDOT and the Crash Avoidance Metrics Partnership Vehicle Safety Communications CAMP VSC2 Consortium. The final section presents seven SAE papers on significant recent and ongoing research by individual companies on a variety of approaches to autonomous vehicles. This book will be of interest to a wide range of readers: engineers at automakers and electronic component suppliers, software engineers, computer systems analysts and architects, academics and researchers within the electronics, computing and automotive industries, legislators, managers and other decision makers in the government, highway sector, traffic safety professionals and insurance and legal practitioners.

Suborbital Erik Seedhouse, 2014-01-27. The nascent commercial suborbital spaceflight industry will soon open the space frontier to commercial astronauts, payload specialists, scientists and of course tourists. This book describes the tantalizing science opportunities to be offered when suborbital trips become routine within the next 12 to 18 months. It describes the difference in training and qualification necessary to become either a spaceflight participant or a fully fledged commercial suborbital astronaut and it describes the vehicles this new class of astronauts will use. Anticipation is on the rise for the new crop of

commercial suborbital spaceships that will serve the scientific and educational market These reusable rocket propelled vehicles are expected to offer quick routine and affordable access to the edge of space along with the capability to carry research and educational crew members Yet to be demonstrated is the hoped for flight rates of suborbital vehicles Quick turnaround of these craft is central to realizing the profit making potential of repeated sojourns to suborbital heights As this book outlines vehicle builders still face rigorous shake out schedules flight safety hurdles as well as extensive trial runs of their respective craft before suborbital space jaunts become commonplace The book examines some of these cash and carry suborbital craft under development by such groups as Blue Origin Masten Space Systems Virgin Galactic and XCOR Aerospace and describes the hurdles the space industry is quickly overcoming en route to the industry developing into a profitable economic entity Seedhouse also explains how the commercial suborbital spaceflight industry is planning and preparing for the challenges of marketing and financing and how it is marketing the hiring of astronauts It examines the role of commercial operators as enablers accessing the suborbital frontier and how a partnership with governments and the private sector will eventually permanently integrate the free market s innovation of commercial suborbital space activities
