**New Solid Acids and Bases** K. Tanabe,M. Misono,H. Hattori,Y. Ono,1990-02-02 This volume summarises and reviews the enormous progress made over the past two decades in solid acids and bases with emphasis on fundamental aspects and chemical principles In recent years many new kinds of solid acids and bases have been found and synthesized The surface properties in particular acidic and basic properties and the structures of the new solids have been clarified by newly developed measurement methods using modern instruments and techniques The characterized solid acids and bases have been applied as catalysts for diversified reactions many good correlations being obtained between the acid base properties and the catalytic activities or selectivities Recently acid base bifunctional catalysis on solid surfaces is becoming a more and more important and intriguing field of study It has been recognized that the acidic and basic properties of catalysts and catalyst supports play an important role in oxidation reduction hydrogenation hydrocracking etc The effect of the preparation method and the pretreatment conditions of solid acids and bases on the acidic and basic properties the nature of acidic and basic sites and the mechanism regarding the generation of acidity and basicity have been elucidated experimentally and theoretically On the basis of the accumulated knowledge of solid acids and bases it is now possible to design and develop highly active and selective solid acid and base catalysts for particular reactions The chemistry of solid acids and bases is now being related to and utilized in numerous areas including adsorbents sensors cosmetics fuel cells sensitized pressed papers and others The information presented in this book will therefore be of interest to a wide ranging readership

**Supercritical Fluids** E. Kiran,Pablo G. Debenedetti,Cor J. Peters,2012-12-06 Supercritical fluids are neither gas nor liquid but can be compressed gradually from low to high density and they are therefore interesting and important as tunable solvents and reaction media in the chemical process industry By adjusting the density the properties of these fluids can be customised and manipulated for a given

process physical or chemical transformation Separation and processing using supercritical solvents such as CO<sub>2</sub> are currently on line commercially in the food essential oils and polymer industries Many agencies and industries are considering the use of supercritical water for waste remediation Supercritical fluid chromatography represents another major analytical application Significant advances have recently been made in materials processing ranging from particle formation to the creation of porous materials The chapters in this book provide tutorial accounts of topical areas centred around 1 phase equilibria thermodynamics and equations of state 2 critical behaviour crossover effects 3 transport and interfacial properties 4 molecular modelling computer simulation 5 reactions spectroscopy 6 phase separation kinetics 7 extractions 8 applications to polymers pharmaceuticals natural materials and chromatography 9 process scale up

*Wall Street and the Rise of Hitler* Antony Cyril Sutton, 2012-12-17 The contribution made by American capitalism to German war preparations can only be described as phenomenal It was certainly crucial to German military capabilities Not only was an influential sector of American business aware of the nature of Naziism but for its own purposes aided Naziism wherever possible and profitable with full knowledge that the probable outcome would be war involving Europe and the United States Penetrating a cloak of falsehood deception and duplicity Professor Antony C Sutton reveals one of the most remarkable but unreported facts of the Second World War that key Wall Street banks and American businesses supported Hitler's rise to power by financing and trading with Nazi Germany Carefully tracing this closely guarded secret through original documents and eyewitness accounts Sutton comes to the unsavoury conclusion that the catastrophic Second World War was extremely profitable for a select group of financial insiders He presents a thoroughly documented account of the role played by J P Morgan T W Lamont the Rockefeller interests General Electric Company Standard Oil National City Bank Chase and Manhattan banks Kuhn Loeb and Company General Motors the Ford Motor Company and scores of others in helping to prepare the bloodiest most destructive war in history This classic study first published in 1976 the third volume of a trilogy is reproduced here in its original form The other volumes in the series study the 1917 Lenin Trotsky Revolution in Russia and the 1933 election of Franklin D Roosevelt in the United States

*Analysis with Supercritical Fluids: Extraction and Chromatography* Bernd Wenclawiak, 2012-12-06 The use of supercritical fluids in analytical chemistry is still growing More and more analysts are discovering the favorable advantages for a number of applications Especially supercritical fluid extraction SFE has attracted a lot of interest in recent years due to its simplicity Supercritical fluid chromatography SFC has become better established and the development of this technique has been accelerated by the many applications with capillary columns which have been published in the literature At first SFC equipment was based on instruments commonly used for liquid chromatography and the first commercial instruments were derived from this technology However capillary columns can be much more easily interfaced to gas chromatography equipment especially to the detectors commonly used for GC Many stationary phases both for packed micro columns and capillary columns have been designed for SFC purposes extending this technology to LC and

OC The most common fluid applied in SFC and SFE is carbon dioxide The advantages of supercritical CO such as having dif 2 fusivity like a gas and solvating power depending on temperature and pressure are also valid for other fluids and modified fluids Both properties are valuable for sample extraction and extraction selectivity
