Detonation C.-O. Leiber, 2003-04-25 Whereas the current plane wave homogeneous flow detonation physics is an excellent engineering tool for numerical predictions under given conditions the multi hot spot model is an additional tool for analyzing phenomena that cannot be explained by classical calculations The real benefit comes from being able to understand without any artificial assumptions the whole phenomenology of detonations and explosions By specifying pressure generating mechanisms one is able to see that the current treatment of the detonics of energetic materials is only a very special but powerful case of explosion events and hazards It becomes clear that physical explosions must be taken into account in any safety considerations In these terms it is easy to understand why even liquid carbon dioxide and inert silo materials can

explode A unique collection of unexpected events which might surprise even specialists has resulted from the evaluation of the model Extensive Air Showers Peter K. F. Grieder, 2010-08-09 Extensive air showers are a very unique phenomenon In the more than six decades since their discovery by Auger and collaborators we have learned a lot about these extremely energetic events and gained deep insight into high energy phenomena particle physics and astrophysics In this Tutorial Reference Manual and Data Book Peter K F Grieder provides the reader with a comprehensive view of the phenomenology and facts of the various types of interactions and cascades theoretical background experimental methods data evaluation and interpretation and air shower simulation He discusses astrophysical aspects of the primary radiation and addresses remaining puzzling questions that cannot yet be answered They remain as a challenge for present and future research in the field The book is split into two volumes Volume I deals mainly with the basic theoretical framework of the processes that determine an air shower and ends with a summary of ways and means to extract information from air shower observations on the primary radiation It also presents a compilation of data of our current knowledge of the high energy portion of the primary spectrum and composition Volume II contains mainly compilations of data of experimental and theoretical nature as well as predictions from simulations of individual air shower constituents Also included are chapters dedicated exclusively to special processes and detection methods Extensive up to date reference lists appear at the end of each chapter Researchers and students working in the field of cosmic ray detection and astroparticle physics will appreciate finding this book in their library The Electric Journal ,1913 *The Ophthalmic Yearbook* ,1927 *The Ophthalmic Year Book ...* ,1927 The Electronics Journal ,1913 **Proceedings of the IRE.** Institute of Radio Engineers,1946 **Official Gazette of the United States Patent Office** United States.
