

Fig. 8 Standard External Shocker

consequently, the lower link may be held in position by means of the link stay plate which is a tractor accessory. If the stay plate is used, the lower link assembly is held in a raised position enabling the operator to use a single speed valve and obtain a relatively uniform type function. The stay plate is a rectangular metal plate, approximately 2 1/2 x 3 inches overall. Three stay pins are provided in the plate, the larger of which is held in the plate near the tractor. Further work is shown in the photo under the tractor, including information on connecting the stay link, including information on connecting the stay link to the tractor. The stay plate is connected under the tractor hooking "Installing the Stay Link".

Figs. 4, 5, and 6 illustrate the "V" extension, spring and external shocker respectively. Note that the external and spring shockers are held fast in the raised position by means of tractor links.

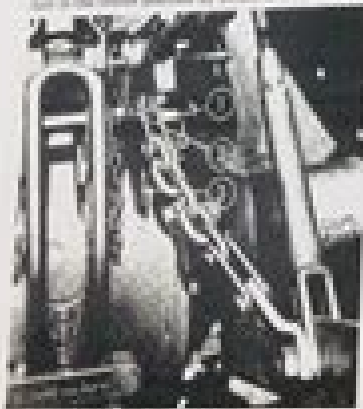

Fig. 9 Link Stay Plate Installed

1. Standard external shocker. 2. V extension spring.

Expanding the Lower Link

When the rule is used with a tractor that is fitted with a single speed valve, it will be necessary to hold the link down in one position so that they will not move up and down with time the external control valve is operated. The most method of increasing the link is to fit stay links, or with the "V" extension shocker (Fig. 4). If another type of shocker is used, it may not be possible to fit stay links, in this case the operator should use a very heavy tractor accessory, which is available from the nearest Massey-Ferguson Dealership. This is the link stay plate (Fig. 9). The link stay plate, under the stay link, causes the lower link in the raised position. The stay plate is a rectangular steel plate, approximately 2 1/2 x 3 inches overall. Three links are provided in the plate, the larger of which is used to connect the plate onto the tractor. The installation of the stay plate is outlined as follows:

1. The long jacking link are at the rear of the tractor center housing is placed through the large hole in the stay plate, with the plate mounted to the right rear of the tractor housing, as in Fig. 9.
2. The right shock chain is disconnected on the point where it is attached to the tractor shock chain bracket by means of a chain pin.
3. The links are raised hydraulically by means of the tractor.
4. The right shock chain is now attached to one of the two remaining holes in the stay plate by means of the chain drive pin. Attach to the upper hole for all models except the high clearance M7 or Tractor, in which case the lower hole should be used. Fig. 9 shows the normal attaching position using a standard clearance M7 65 Tractor.
5. Adjustment of the jacking assembly right hand lift rod may be necessary to raise the shock chain to the attaching position. After attachment of the shock chain, remove any slack it may have by means of the lift rod jacking handle.

General Control Valves

If a hydraulic lift is to be used on the rule, it will be necessary to fit an external hydraulic control valve to the tractor, unless one is already fitted. Both single and double acting control valves are available from your nearest Massey-Ferguson Dealership. The single acting valve comes in two versions, a single and double speed, Figs. 10 and 11. The double acting valve comes as a double speed version with an additional single speed unit available to convert it into a triple speed valve. The regular double acting, double speed valve is illustrated in Fig. 12.

If a single acting type cylinder is to be used on the rule, a single acting control valve is all that is necessary (although a double acting valve may be used). If a double acting cylinder is to be used on

Fig. 10 Single Speed Valve

the rule a double acting valve must be fitted.

All of these valves are fitted in Massey-Ferguson law tractors in a similar manner. This is explained under "Installing an External Control Valve", page 8. The hose hook up between the valve and the cylinder varies slightly depending on the type of valve. This information will be found at the end of the section "Installing an External Control Valve", under the sub-heading reference to the valve and cylinder in question. Instructions on connecting a single acting, single speed valve to the cylinder are not included as no confusion is likely, there being only one outlet port. The hose should be fitted to the tractor illustrated in Fig. 10.

Fig. 11 Double Speed Valve

Fig. 12 Double Acting, Double Speed Valve

Single Speed Valve

The single speed control valve, shown in Fig. 10, has a single control lever and provides a single outlet to attach an external cylinder or cylinders. A small squander attached to the valve body and a back check on the control lever makes it convenient for the operator to lock the control valve in either the lifting or lowering position.

If a single speed valve is used it will be necessary to lock the tractor rear link in one position in order to prevent them moving up and down whenever the valve is operated. This action would be particularly noticeable as the action of the valve would cause a delay in the operation of the rule hydraulic cylinder. Further information on this subject is contained under the heading "Expanding the Lower Link", page 6.

Double Speed Valve (Single Acting)

The double speed control valve, shown in Fig. 11, has two control levers and provides two outlets for attaching external cylinder. The left hand control lever is equipped with a small squander and back check so that the control lever may be locked in either the lifting or lowering position.

The double speed version is particularly useful where two single acting cylinders are to be used at the same time, as for instance, when using the rule and a side mount mower simultaneously.

NOTE: The double speed version of the single acting valve cannot be used to control a double-acting cylinder, a double acting valve (Fig. 12) must be used for this purpose.
