 Sustainable Development ESD and Global Citizenship Education have been prioritized in the United Nations Agenda 2030  
 under SDG 4 7 There is a growing awareness that treating concepts such as global citizenship sustainable development  
 climate urgency and health and well being as separate subjects or topics to be added to a curriculum is ineffective as they  
 are highly interconnected Additionally this approach is problematic as schools already have an overcrowded curriculum This  
 edited volume brings together a range of scholars and reflective practitioners from across the globe who are investigating  
 and enacting a whole school approach WSA in education for sustainability While the WSA and related approaches such as  
 those advocated by EcoSchools are becoming more popular there is a lack of understanding of their underlying principles  
 and the different manifestations in diverging socio cultural contexts at different educational levels This collection of chapters  
 provides a deeper understanding of the WSA while also addressing its effectiveness possibilities for upscaling professional  
 development needs for WSA practitioners interlinkages with more conventional curriculum requirements expectations of  
 students and parents and more This is an open access book Algorithms for Parallel Processing Michael T. Heath,Abhiram
