Catalano,Karen C. Catalano,2022-05-31 While more and more undergraduate engineering programs are moving toward a multi disciplinary capstone experience there remains a need for a suitable textbook The present text seeks to meet that need by providing a student friendly step by step template for this important and culminating academic journey beginning with the student design team s first meeting with the client to the final report and presentation The text provides a wide range of design tools a discussion of various design methodologies a brief history of modern engineering and a substantive consideration of engineering ethics In addition chapters are included on communication team building and dealing with the inevitable obstacles that students encounter Throughout the text emphasis is placed upon the issues of environmental impact and the importance of diversity Visualizing Dynamic Systems Mojgan M Haghani,2022-06-01 This book is aimed to help instructional designers science game designers science faculty lab designers and content developers in designing interactive

learning experiences using emerging technologies and cyberlearning The proposed solutions are for undergraduate and graduate scientific communication engineering courses scientific research communication and workforce training Reviewing across the science education literature reveals various aspects of unresolved challenges or inabilities in the visualization of scientific concepts Visuospatial thinking is the fundamental part of learning sciences however promoting spatial thinking has not been emphasized enough in the educational system Hegarty 2014 Cognitive scientists distinguish between the multiple aspects of spatial ability and stress that various problems or disciplines require different types of spatial skills For example the spatial ability to visualize anatomy cross sections is significantly associated with mental rotation skills The same is true for physical problems that often deal with spatial representations However most of the physics problems are marked by dynamicity and visualizing dynamicity is inferred by the integrations of different participating components in the system Therefore what is needed for learning dynamicity is visualizing the mental animation of static episodes This book is a leap into designing framework for using mixed reality XR technologies and cyberlearning in communicating advanced scientific concepts The intention is to flesh out the cognitive infrastructure and visuospatial demands of complex systems and compare them in various contexts and disciplines The practical implementation of emerging technology can be achieved by foreseeing each XR technology's affordances and mapping those out to the cognitive infrastructure and visuospatial demands of the content under development

Geometric Programming for Design Equation Development and Cost/Profit Optimization (with illustrative case study problems and solutions), Third Edition Robert C. Creese, 2022-05-31 Geometric Programming is used for cost minimization profit maximization obtaining cost ratios and the development of generalized design equations for the primal variables The early pioneers of geometric programming Zener Duffin Peterson Beightler Wilde and Phillips played important roles in its development Five new case studies have been added to the third edition There are five major sections 1 Introduction History and Theoretical Fundamentals 2 Cost Minimization Applications with Zero Degrees of Difficulty 3 Profit Maximization Applications with Zero Degrees of Difficulty 4 Applications with Positive Degrees of Difficulty and 5 Summary Future Directions and Geometric Programming Theses Dissertations Titles The various solution techniques presented are the constrained derivative approach condensation of terms approach dimensional analysis approach and transformed dual approach A primary goal of this work is to have readers develop more case studies and new solution techniques to further the application of geometric programming
