

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- [I] circles are females and squares are males.
- [I] is shaded = affected = square indicates that a person has the trait.

The pedigree seen below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person I - 1. Then answer the questions below the table.

What do you know about the genotype of the mother of II?

These parents (I) had a color blind son (II). His dad has no recessive, but color blind allele, from his mother. Since the mother is not shaded, she must be a carrier.

Number II is colorblind, just like his father. Where could he get his allele for colorblindness?

Yes, he inherited his allele for colorblindness from his mother. Must have been that 1/2 chance from her alleles.

Number number II and II were colorblind. How many have a colorblindness [X^bY]

That mother must be a carrier for color blindness.

What must be the genotype of the parents of a colorblind daughter? Explain.

To have a color blind daughter, she must have the recessive allele from each parent. Her father must be X^bY and mother must have to be X^bX^b.

If mother II has a normal son, what is the probability that their son will be colorblind?

$X^B X^b \times X^B Y \rightarrow$ all of their sons will have color blind.

(Carrier)
