## Unit 6: Similarity Performance Tasks

**Instructions:** Choose one performance task. Write all your work on a separate clean piece of paper and attach it to this page.

### Big Idea: Visualization, Reasoning and Proof, and Similarity

You can show that two triangles are similar when certain relationships exist between two or three pairs of corresponding parts. If you know two triangles are similar, then you know their corresponding sides are proportional.

### Performance Task 1

In the diagram below,  $\overline{AC} \parallel \overline{DF} \parallel \overline{BH}$  and  $\overline{CB} \parallel \overline{FE}$ .

- Find four similar triangles. Explain how you know that they are similar.
- Using the similar triangles you found in part (a), complete the following extended proportion:

$$\frac{AB}{AC} = \frac{DE}{?} = \frac{?}{DG} = \frac{?}{?}$$

### Big Idea: Similarity

Lines with special relationships to the sides and angles of a triangle determine proportional segments. When you know the lengths of some of the segments, you can use a proportion to find an unknown length.
