The Hydraulic Transport and Storage of Extractive Waste Mike Cambridge,2018-01-18 This book offers the guidelines on long term confinement of fine particulate waste products in a safe and environmentally acceptable location It seeks to present the state of the art drawing on combined experience from within the European Union EU on good international practice where relevant and on lessons learnt from recent untoward incidents These guidelines have been developed in parallel with the development of the European Standard on Earthworks prEN 16907 and the contents have been influenced by the well publicised need for guidance to all stakeholders on both technical and regulatory aspects of the permitting design and construction of extractive waste facilities in Europe The Extractive Waste Directive EWD imposes a duty on all operators and regulators to ensure the competent design operation and closure of such facilities However though some guidance has been published on a limited number of related technical elements the relevance of these contributions has been diminished by the lack of an integrated approach It is now evident to both regulatory bodies and operators alike that a unified and comprehensive document providing guidance to all stakeholders is required if the future of mining within the EU is to be assured and further untoward incidents avoided These guidelines seek to address all technical stages of the development of a hydraulic fill project in the context of the EWD with an emphasis on waste and facility characterisation and on the risk based assessments which underwrite them They are intended for use by all stakeholders involved in those European industries which involve the generation transport and storage of fine particulate waste products requiring long term confinement in a safe stable and environmentally acceptable location
