 Rendering is a crucial component of computer graphics the conversion of a description of a 3D scene into an image for
 display Algorithms for animation geometric modeling and texturing all must feed their results through some sort of rendering
 process for the results to be visible in an image Focusing on realistic images physically based rendering incorporates ideas
 from a range of disciplines including physics biology psychology cognitive science and mathematics This book presents the
 algorithms of modern photorealistic rendering and follows step by step the creation of a complete rendering system As each
 new rendering concept is introduced it is also shown implemented in code there is no better way to understand the subtle
 and complex process of rendering The code itself is highly readable written in the literate programming style that mixes text
 describing the system with the code that implements it The result is a stunning achievement in graphics education for
 students professionals and researchers CD ROM with the source code for a complete rendering system for Windows OS X
 Linux with many examples of images created by the system throughout the 4 color text The code and text are tightly woven
 together through the technique of literate programming with a unique indexing feature that lists all locations of functions
