

Majority of medical terminologies originated from Latin or Greek. These simultaneously occurred with the invention of modern medicine by the Greeks and the dominance of Latin when it was the Western world's common language. Other languages, like French and German, have also contributed to medical terminologies, and numerous modern terminologies originated from English, which is currently accepted as the international language (Cohen, 2008). Almost all terminologies associated with surgery and diagnosis originated from Greek, and almost all anatomical terminologies can be attributed to Latin (Ehrlich & Schroeder, 2012). The Greeks were the pioneers of the field of medicine, but Latin is the central source of the medical vocabulary.

Seventy-five percent of the medical vocabulary is derived from Greek or Latin terminology. Current modifications are carried out to make the terminologies broader. The study of etymology assists in the deciphering of medical terminologies. Etymology reveals a terminology's history and origin (Leonard, 2005). Several examples of etymology are acronyms, terms derived from Greek, and terms derived from Latin. Acronyms are contemporary language terminologies that correspond to lengthy expressions like "laser", which corresponds to "light amplification by stimulated emission of radiation" (Ehrlich & Schroeder, 2012, 394). On the other hand, an example of a term derived from Greek is "hemorrhage", which means "a rapid, uncontrollable loss of blood" (Henderson & Dorsey, 2008, 28). And an example of a term derived from Latin is "femur", which refers to a "bone in the leg" (Henderson & Dorsey, 2008, 28).
