Data: A Guide to Humans Phil Harvey, Noelia Jiménez Martínez, 2021-01-21 Data is humanity's most important new resource It has the capacity to provide insight into every aspect of our lives the planet and the universe at large it changes not only what we know but also how we know it Exploiting the value of data could improve our existence as much as if not more than previous technological revolutions Yet data without empathy is useless There is a tendency in data science to forget about the human needs and feelings of the people who make up the data the people who work with the data and those expected to understand the results Without empathy this precious resource is at best underused at worst misused *Data A Guide to Humans* will help you understand how to properly exploit data why this is so important and how companies and governments are currently using data It makes a compelling case for empathy as the crucial factor in elevating our understanding of data to something which can make a lasting and essential contribution to your business your life and maybe even the world A Darwinian Survival Guide Daniel R. Brooks, Salvatore J. Agosta, 2024-02-06 How humanity brought about the climate crisis by departing from its evolutionary trajectory 15 000 years ago and how we can use evolutionary principles to save ourselves from the worst outcomes Despite efforts to sustain civilization humanity faces existential threats from overpopulation globalized trade and travel urbanization and global climate change In *A Darwinian Survival Guide* Daniel Brooks and Salvatore Agosta offer a novel and hopeful perspective on how to meet these tremendous challenges by changing the discourse from sustainability to survival Darwinian evolution the world's only theory of survival is the means by which the biosphere has persisted and renewed itself following past environmental perturbations and it has never failed they explain Even in the aftermath of mass extinctions enough survivors remain with the potential to produce a new diversified biosphere Drawing on their expertise as field biologists Brooks and Agosta trace the evolutionary path from the early days of humans through the Late Pleistocene and the beginning of the Anthropocene all the way to the Great Acceleration of technological humanity around 1950 demonstrating how our creative capacities have allowed humanity to survive However constant conflict without resolution has made the Anthropocene not only unsustainable but unsurvivable Guided by the four laws of biotics the authors explain how humanity should interact with the rest of the biosphere and with each other in accordance

with Darwinian principles They reveal a middle ground between apocalypse and utopia with two options alter our behavior now at great expense and extend civilization or fail to act and rebuild in accordance with those same principles If we take the latter then our immediate goal ought to focus on preserving as many of humanity's positive achievements from high technology to high art as possible to shorten the time needed to rebuild

Boone Bartholomees, Army War College (U.S.). Strategic Studies Institute, 2012 This edition of the U S Army War College Guide to National Security Policy and Strategy continues to reflect the structure and approach of the core national security strategy and policy curriculum at the War College The 5th Edition is published in two volumes that correspond roughly to the Department of National Security and Strategy s core courses Theory of War and Strategy and National Security Policy and Strategy Like previous editions this one is based on its predecessor but contains both updates and new scholarship Over a third of the chapters are new or have undergone significant rewrites Many chapters some of which appeared for years in this work have been removed Nevertheless the book remains unchanged in intent and purpose Although this is not primarily a textbook it does reflect both the method and manner we use to teach strategy formulation to America s future senior leaders The book is not a comprehensive or exhaustive treatment of either strategic theory or the

policymaking process Both volumes are organized to proceed from the general to the specific Thus the first volume opens with general thoughts on the nature and theory of war and strategy proceeds to look at the complex aspect of power and concludes with specific theoretical issues Similarly the second volume begins by examining the policy strategy process moves to a look at the strategic environment and concludes with some specific issues This edition continues the effort begun in the 4th Edition to include several short case studies to illustrate the primary material in the volume
