González, David Alejandro Pelta, Natalio Krasnogor, Germán Terrazas, 2010-04-16 Many aspects of Nature Biology or even from Society have become part of the techniques and algorithms used in computer science or they have been used to enhance or hybridize several techniques through the inclusion of advanced evolution cooperation or biologically based additions The previous NICSO workshops were held in Granada Spain 2006 Acireale Italy 2007 and in Tenerife Spain 2008 As in the previous editions NICSO 2010 held in Granada Spain was conceived as a forum for the latest ideas and the state of the art research related to nature inspired cooperative strategies The contributions collected in this book cover topics including nature inspired techniques like Genetic Algorithms Evolutionary Algorithms Ant and Bee Colonies Swarm Intelligence approaches Neural Networks several Cooperation Models Structures and Strategies Agents Models Social Interactions as well as new algorithms based on the behaviour of fireflies or bats *Sprayed Concrete Lined Tunnels* Alun Thomas, 2008-10-08 Practising engineers on site in the design office or in client organizations will find this book an excellent introduction to the design and construction of sprayed concrete lined SCL tunnels The complex behaviour of the early age behaviour of the sprayed concrete requires careful management This book covers all aspects of SCL tunnelling from the constituents of sprayed concrete to detailed design and management during construction Although there is a close interdependence between all the facets of sprayed concrete few engineers have the right breadth of experience and expertise and this urgently needs to be transferred to the wider engineering community Disseminating essential information for tunnelling engineers *Sprayed Concrete Lined Tunnels* is key reading for all involved in or studying the process Advanced Numerical Methods for Complex Environmental Models: Needs and Availability István Faragó, Ágnes Havasi, Zahari Zlatev, 2013-12-10 High air pollution levels pose a significant threat to plants animals and human beings Efforts by researchers are directed towards keeping air pollution levels below well defined critical levels in order to maintain a sustainable atmosphere and environmental system The application of advanced mathematical models is important for researchers to achieve this goal as efficiently as possible Mathematical models can be used to predict answers to many important questions about the environment This application comes with several complex theoretical and practical obstacles which need to be resolved A successfully applicable mathematical model needs to enable researchers to

Mathematically describe all important physical and chemical processes Apply fast and sufficiently accurate numerical methods Ensure that the model runs efficiently on modern high speed computers Use high quality input data both meteorological data and emission inventories in the runs Verify the model results by comparing them with reliable measurements taken in different parts of the spatial domain of the model Carry out long series of sensitivity experiments to check the response of the model to changes of different key parameters Visualize and animate the output results in order to make them easily understandable even to non specialists This monograph thoroughly describes mathematical methods useful for various situations in environmental modeling including finite difference methods splitting methods parallel computation etc and provides a framework for resolving problems posed in relation to the points listed above Chapters are written by well known specialists making this book a handy reference for researchers university teachers and students working and studying in the areas of air pollution meteorology applied mathematics and computer science
