National Project Management Minoru Shimamoto, 2020-11-10 This book clarifies the challenges and outcomes of the Sunshine Project a national project in Japan for developing new energy that was launched about 40 years ago at the time of the first oil crisis in the early 1970s and ended as planned in the early 2000s The Sunshine Project was the government s national project for developing new energy technologies such as solar energy and other natural energy sources

what we call renewable energy today The book considers why policies were successful in some areas but did not have the intended effect in other areas It explains how technology innovation was employed to achieve energy policy goals and to tackle environmental issues If we can present suggestions for how to structure national projects it may also be possible to identify ways for industry government and academia to come together to find solutions not only to environmental energy problems but also to other social problems Herein lies the goal of this book Although the development of new energy is the main subject of the book the author also scrutinizes the governmental decision making process involved in planning policy the creative process and the design of systems of collaboration between industry government and academia as well as cases where corporations have developed commercial versions of new energy products The main part of the book consists of three case studies interspersed with two reflective chapters The first case study describes the Sunshine Project from the perspective of project management based on the perspective of government The second case study is a detailed examination of the routines in all organizations whether industry government or academia and of the autonomy of the project organization The third case study increases the degree of detail to focus on the smallest unit of analysis the intentions and motivations of key individuals participating in the project
