The Global Work of Art Caroline A. Jones, 2017-06-01 Global biennials have proliferated in the contemporary art world but artists' engagement with large scale international exhibitions has a much longer history that has influenced the present in important ways Going back to the earliest world's fairs in the nineteenth century this book argues that globalism was incubated in a century of international art contests and today constitutes an important tactic for artists As world's fairs brought millions of attendees into contact with foreign cultures products and processes artworks became juxtaposed in a theater of nations which challenged artists and critics to think outside their local academies From Gustave Courbet's rebel pavilion near the official art exhibit at the 1855 French World's Fair to curator Beryl Madra's choice of London based Cypriot Hussein Chalayan for the off site Turkish pavilion at the 2006 Venice Biennale artists have used these exhibitions to reflect on contemporary art speak to their own governments back home and challenge the wider geopolitical realm changing art and art history along the way Ultimately Caroline A Jones argues the modern appetite for experience and event structures which were cultivated around the art at these earlier expositions have now come to constitute contemporary art itself producing encounters that transform the public and force us to reflect critically on the global condition

L'art de l'ingénieur de Perronet à Caquot Jean-Pierre Gibling, 2004 C'est un parcours historique de près de trois siècles dans les techniques et la science de Jean Rodolphe Perronet Albert Caquot que le Conseil général des ponts et chaussées nous invite par ce numéro hors série des Annales des ponts et chaussées dit l'occasion de son bicentenaire Son œuvre a un caractèreminent d'originalité Il n'est pas la remorque des idées des autres Ses recherches sont très personnelles peu de personnes laissent autant que lui une impression de force et de puissance A la lecture de cet ouvrage il apparaît que cette appréciation extraite de l'avis d'Emile

Picard alors secrétaire perpétuel de l'Académie des sciences lors de la candidature d'Albert Caquot peut par bien des aspects s'appliquer tous les ingénieurs des ponts et chaussées qui sont venus. Leurs œuvres ressortissent aux sciences et aux techniques dans une symbiose aussi riche qu'originale rendue possible par leur solide formation mathématique qui fait d'eux des novateurs voire des pionniers tels Jules Dupuit souvent considéré comme le premier économiste moderne **In Foreign**

Lands: The Migration of Scientists for Political or Economic Reasons Maria Teresa Borgato, Christine Philpott, 2022-04-13

This proceedings volume collects the stories of mathematicians and scientists who have spent and developed parts of their careers and life in countries other than those of their origin. The reasons may have been different in different periods but were often driven by political or economic circumstances. The lack of suitable employment opportunities in their home countries, adverse political systems and wars have led to the emigration of scientists. The volume shows that these movements have played an important role in spreading scientific knowledge and have often changed the scientific landscape, tradition and future of studies and research fields. The book analyses in particular aspects of Euler's, Lagrange's and Boscovich's scientific biographies, migrations of scientists from France, Spain and Greece to Russia in the eighteenth and nineteenth centuries and from Russia to France in the twentieth century, exiles from Italy before the Italian Risorgimento, migrations inside Europe and the escape of mathematicians from Nazi fascist Europe between the two World Wars, as well as the mobility of experts around the world. It includes selected contributions from the symposium *In Foreign Lands: The Migration of Scientists for Political or Economic Reasons* held at the Conference of the International Academy of the History of Science in Athens, September 2019. **Aesthetics and Technology in Building** Pier Nervi, 2018-07-23

The UNESCO headquarters in Paris, the Pirelli skyscraper in Milan, the Palazetto dello Sport in Rome, the soaring beauty of Pier Luigi Nervi's visionary designs and buildings changed cityscapes in the twentieth century. His uncanny ingenuity with reinforced concrete combined with a gift for practical problem solving revolutionized the use of open internal space in structures like arenas and concert halls. *Aesthetics and Technology in Building: The Twenty-First Century Edition* introduces Nervi's ideas about architecture and engineering to a new generation of students and admirers. More than 200 photographs, details, drawings and plans show how Nervi put his ideas into practice. Expanding on the seminal 1961 Norton Lectures at Harvard, Nervi analyzes various functional and construction problems. He also explains how precast and cast-in-place concrete can answer demands for economy, technical and functional soundness and aesthetic perfection. Throughout, he uses his major projects to show how these now iconic buildings emerged from structural truths and far-sighted construction processes. This new edition features dozens of added images, a new introduction and essays by Joseph Abram, Roberto Einaudi, Alberto Bologna, Gabriele Neri and Hans Christian Schink on Nervi's life, work and legacy. *France* Jean-Louis Cohen, 2014-08-15. Everyone knows Notre-Dame, the Eiffel Tower and the châteaux of the Loire Valley, but French architects have also produced some of the most iconic buildings of the twentieth century, playing a central role in the emergence and development of modernism. In France, Jean

Louis Cohen presents a complete narrative of the unfolding architectural modernity in the country grappling not only with the buildings but also with the political and critical context surrounding them. Cohen examines the developments in urban design and architecture within France depicting the continuities and breaks in French architecture since 1900 against a broader international background. Describing the systems of architectural exchange with other countries including Italy, Germany, Russia and the United States, he offers a new view on the ideas, projects and buildings otherwise so often considered only from narrow nationalistic perspectives. Cohen also maps the problematic search for a national identity against the background of European rivalries and France's colonial past. Drawing on a wealth of recent research, this authoritatively written book will challenge the way design professionals and historians view modern French architecture.

L'art des structures Aurelio Muttoni, 2015-10-01. Le thème de la structure constitue depuis toujours un aspect fondamental de la construction intéressant aussi bien les ingénieurs que les architectes. Cet ouvrage consacré aux structures en architecture s'est donné pour objectif de contribuer à faciliter le dialogue entre ces deux domaines professionnels. L'art des structures offre un panorama complet sur les structures portantes et leur fonctionnement en décrivant la manière dont les charges sont reprises et transmises jusqu'au sol. À cet effet, une approche intuitive est privilégiée : les bases de l'équilibre sont notamment expliquées en visualisant les efforts intérieurs d'ouvrages d'art historiques et modernes à l'aide de simples outils graphiques. L'ouvrage est organisé selon un parcours progressif débutant par une analyse des forces des charges et des conditions nécessaires pour que les forces soient en équilibre. Il se poursuit avec une étude des concepts d'effort de résistance, de déformation et de rigidité permettant de comprendre comment une structure doit être dimensionnée. L'ouvrage analyse ensuite les structures sollicitées par la traction : câbles dans le plan, réseaux de câbles et membranes, celles sollicitées par la compression : colonnes, arcs, voûtes, coupôles et coques, et les structures combinées avec traction et compression : structures funiculaires, treillis, poutres, cadres, grilles, de poutres voilées et dalles. L'ouvrage se conclut par une étude du phénomène de l'instabilité des éléments comprimés et de ses conséquences sur la conception des structures porteuses.

The proceedings of second conference of the Construction History Society which took place on 20 and 21 March 2015 at Queens College Cambridge featuring 28 peer reviewed papers covering a wide variety of subjects on the theme of construction history.

Kant Trouble Diane Morgan, 2002-09-11. Kant Trouble offers a highly original and incisive reading of some of the lesser known aspects of Kantian thought. Throughout Morgan challenges the widely held view of Kant as the exponent of concrete and rigid rationality and argues that his airtight architectonic mode of reasoning overlooks certain topics which destabilise it. These include temporary forms of architecture such as landscape gardening, examples which undermine the autonomy of the Kantian subject, for example freemasonry and the concept of radical evil, all of which suggest that Kant's thought was capable of accommodating troubling and subversive themes. Morgan

s compelling discussion arrives at a fresh and ground breaking perspective on Kant whereby he is no longer to be regarded as a concrete rationalist but as a daring thinker not afraid to entertain ideas highly threatening to his own system and to the humanistic legacy of the enlightenment **Place Ville Marie: Montreal's Shining Landmark**
