

A SMARTER PHONE FOR A SMARTER LIFESTYLE.

LG Quantum, built on the Windows® Phone OS 7 glance-and-go experience platform, was designed to be easy to use and do more in fewer steps. LG Quantum's convenient full QWERTY keyboard enables even faster communication for those longer e-mails when a touch screen just won't cut it. The superfast 1GHz processor, 720p HD video capture and playback, and exclusive "Play To" feature that streams your media to a DLNA-DMR equipped entertainment device make LG Quantum an incredibly cool, and seriously fun, productivity tool.

A SIMPLER, FASTER UI. LG Quantum's Windows Phone OS 7 leverages a 1GHz processor that updates your dynamic tiles or "hubs" quickly.

THE RIGHT TEXT ENTRY TOOLS. Crafting your thoughts is easier than ever with LG Quantum's capacitive touch screen virtual QWERTY. It also has a slide-out landscape full QWERTY keyboard so you can type even faster.

YOUR LIFE ON DISPLAY. "Play To" uses built-in DLNA technology to talk wirelessly—and oh so easily—with a DLNA-DMR enabled device. Show your favorite shots and video clips or stream your playlist to a Windows 7 PC, big screen TV, or a real sound system.

HIGH-DEF CINEMA. LG Quantum plays even bigger than its 480 x 800 screen looks. With a 5MP camera, your photos are movie poster quality, and with 16:9 ratio, 720p HD video recording (24 fps) and playback (60 fps), your "indie" film will look rich and smooth.

Modern Astrometry Jean Kovalevsky, 2013-03-09 Astrometry is the domain of astronomy devoted to the determination of positions and their time variations and by extension the apparent dimensions and shapes of celestial bodies Although several books describe the theoretical foundations of positional astronomy they touch only slightly on the description of instruments and the procedures for obtaining actual geometrical or kinematic quantities which are among the basic observational data in the study of the Universe and of its components The goal of the present book is in contrast to provide an up to date description of astrometric techniques particularly the most recent and powerful ones whether the instruments are on the ground or in space Until the end of the 19th century before the development of physical astronomy all astronomical observations were directed towards obtaining positions of celestial bodies Since then astrophysics has become the most important domain of astronomy With the extension of observations to almost all wavelengths from radio waves to gamma rays with the use of very sensitive new receivers and the development of fast

of the workshop presentation The aim of the workshop was to bring together leading researchers from a number of related disciplines in which strong Coulomb interactions play a dominant role Compared to the 1977 meeting in Orleans la Source France and the 1982 meeting in Les Houches France it is apparent that the field of strongly coupled plasmas has expanded greatly and has become a very significant field of physics with a wide range of applications This workshop had a far greater participation of experimental researchers than did the previous two and some confrontations of real experiments with theoretical calculations occurred In the two earlier meetings the theoretical presentations were dominated by numerical simulations of static and dynamic properties of various strongly coupled plasmas The dearth of experiments in the 1970 s is now replaced by some very good experimental efforts
