Emerging-market Multinational Enterprises in East Central Europe Ágnes Szunomár, 2020-11-23 The rise of multinational enterprises MNEs from emerging markets is topical important and poses a number of questions and challenges that require considerable attention in the future from academia as well as business management The recent takeovers of high profile companies in developed or developing countries by non European emerging market MNEs EMNEs such as Lenovo Wanhua China Hindalco India CVRD Brazil Cemex Mexico Lukoil Russia etc as well as the greenfield or brownfield investments of emerging companies such as Huawei ZTE Tata Pepco etc show a new trend where new kind of firms become major players globally EMNEs have become important players in several regions around the globe ranging from the least developed countries of Africa through the developing markets in Latin America and Asia to the developed countries of the United States or the European Union including East Central European ECE countries EMNEs presence on the global level has resulted in numerous studies in the international literature but those research results barely cover EMNEs activities in the ECE region in the East Central European EU member countries including the Czech Republic Hungary Poland Slovakia and Slovenia The existing books typically focus on the investment activity of a single country or region such as China or East Asia but a comprehensive analysis is still missing in this regard The novelty of this edited volume is that it aims at exploring EMNEs location determinants strategies activities and challenges in East

Central Europe by discussing its anomalies to the traditional theories as well as to other types of MNEs in the ECE region. The authors focus on EMNEs not only from China but from other important emerging countries too such as Russia, India, South Korea, Taiwan, Turkey, Brazil or South Africa. *Nodes in Transport Networks – Research, Data Analysis and Modelling* Elżbieta Macioszek, Nan Kang, Grzegorz Sierpiński, 2020-01-06. The publication delivers numerous valuable guidelines particularly useful when making decisions related in the subject matter to road and rail nodes located in dense transport networks. The know-how displayed while discussing practical examples as well as the decision-making support systems described in the publication will certainly attract the interest of those who daily face the challenge of seeking solutions to the operational and functional problems of transport nodes in contemporary transport networks and systems. This publication is dedicated to local authorities involved in planning and preparation of development strategies for specific transport-related issues in both urban and regional areas as well as to representatives of business and industry being those who participate directly in the implementation of traffic engineering solutions. The guidelines provided in individual chapters of the publication will make it possible to address the given problem in an advanced manner and simplify the choice of appropriate strategies including those related to synchronisation of road traffic streams, improving the capacity, road traffic safety analysis, evaluation of changes in drivers' behaviour on account of introducing countdown timers at signal-controlled intersections, using UAV data, the influence of the type of traffic organisation on the behaviour of pedestrians at tram line crossings. On the other hand, since the publication also concerns the new approach to theoretical models including potential places of integration of public transport with the railway network or the speed adviser for pedestrians enabling them to choose the optimal path at signal-controlled intersections, it should also attract the attention of researchers and scientists studying this body of problems. The publication entitled *Nodes in transport networks research data analysis and modelling* contains selected papers submitted to and presented at the 16th Transport Systems Theory and Practice Scientific and Technical Conference organized by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology. The conference was held on 16-18 September 2019 in Katowice, Poland.
