Systemic Approach to Categorizing and Modeling Requirements Azeddine Chikh,2025-05-13 Current categorizations of software requirements are highly ambiguous and inconsistent mainly due to the lack of a clear common framework for defining software elements and relevant environmental factors This book overhauls the traditional approach by proposing an innovative systemic method for categorizing and modeling software requirements It introduces an unprecedented frame of reference putting an end to divergent interpretations by precisely defining software elements and environmental factors This framework forms an indispensable basis for all the other components of this approach a redefinition of requirements a hybrid categorization that combines several taxonomies and scales a metadata model used to qualify requirements and a multi view model that represents all possible categories of requirements By adopting this new approach professionals will be able to improve the clarity precision and relevance of their specifications and thus optimize the success of their software projects
