During past thirty years since Chiyoda Kogaku Seisaku K. K. was first established, many different models of cameras have been marketed by us and in meeting with the requirements of those who desire to enjoy color photography we have produced the Minolta Mini Slide Projector.

The projector is designed for the most convenient handling and its small but novel design and structure will surely suit your requirements. It can easily project a picture over one meter in width in any small room and is highly recommended for family enjoyment.

## INSTRUCTIONS

The operation of this projector is so simple that even beginners can enjoy the projection with it.

(A) As shown in Figure 2, hold Outer Case (8) with one hand, push Outer Case Opening Button (11) with the other, then pull up Outer Case (8). By so doing, the lens portion (1, 2, 3, 4) will extend to the front automatically by means of Supporting Rail (9). Then it is in condition to make projections as illustrated in Figure 1.

(B) Next, plug in the Electric Cord (13), then switch on the in-between connection. The Lamp (1) will light and is now ready for projecting.

(C) It is now ready for inserting carrier that holds the slide (film in frame) into the Base Plate (12). There are three kinds of carriers, and each will operate as respectively illustrated.

(D) **CARRIER**: Insert the carrier from the top as arrow-marked, into the Carrier Base Plate (12) as shown in Figure 3 then, insert the slide. To change the projected picture, just push the knob.

(E) **ADAPTER FOR "ARISQUIT"**: To use the "Arisquit" of U. S. make, attach this adapter previously to the projector. Attaching the adapter is just the same as in the case of the Carrier.

(F) **FR AUTO-CHANGER**: This equipment is to make automatically quick transfer of the position of many projection slides. The fixing of auto-changer to the projector is just the same as shown in Figure 4.

When fixing it, put slide frames that have been arranged in order of showing in the left side as shown in Figure 5 and push the lower cover and then push it back. By so doing, the first slide frame will be in position to be projected. By repeating the action once again, the first slide frame will be turned to the opposite side and the second slide will come in its projected position. The projection will be made one by one by repeating the action.

(G) **STRIP FILM CARRIER**: This is a carrier system of a roll of strip film. Fixing it is the same as mentioned above. This carrier moves the frame of the film into its projecting position automatically just by turning of the knob.
