electrons and holes migrating in a semiconductor or currents diffusing in a moving metal. Because the second culture is primarily concerned with the interaction between electromagnetic fields and media where the latter are often responsible for the dominant dynamical processes it addresses applications that are more widely ranging. A few from a very long list would include electrostatic printing, rotating machines, power transmission apparatus, the electromagnetics of biological systems and physical electronics. Whether by nature or by design the phenomena of interest are generally electrostatic or magnetoquasistatic in this second branch of electrodynamics. It is tempting to say that the two branches of electrodynamics can be distinguished by the frequency range but electron beam and microwave magnetic devices with their respective plasma oscillations and spin waves are examples where the frequencies can be in the GHz range while the fundamental interactions are quasistatic. By design so also are those that determine the frequency response of a transistor.

*Electricity, Electromagnetic Induction*, 1966      **Four Lectures on Static Electric Induction** James Edward Henry Gordon, 1881      **Electromagnetic Induction and Alternating Current - Thoughtful Physics** Anirban Naskar, 2018-12-01

Thoughtful Physics for JEE Mains Advanced Electromagnetic Induction and Alternating Current has been designed in keeping with the needs and expectations of students appearing for JEE Main and Advanced. It explains all phenomena through reasons from principles rather than by analogy and usually that reason is Physics. Its coherent presentation and compatibility with the latest prescribed syllabus and pattern of JEE will prove extremely useful to JEE aspirants. Subject matter is kept simple but effective to strategically strengthen concepts as well as their applications to Problem Solving. Complete theory, series of solved/unsolved examples in varied situations, final touch points for exam.

*Electromagnetic induction is described* Michael Faraday, 1958      **Electromagnetism**, 1997. A more detailed investigation of how moving a magnet near a conductor produces electricity, electromagnetic induction. We make a simple AC and DC generator, turn the generator into an electric motor, make a transformer and then an electromagnetic induction coil. The effects of eddy currents and temperature are also considered. This program looks specifically at Magnets inducing electron flows, Solenoids, generators, alternators, Transformers, Lenz's law, induction coils, back EMF, eddy currents, Generators, Motors.
