**Circumscribed about, Quadrilaterals** Alan Horwitz, 2024-05-29 The main focus of this book is disseminating research results regarding the pencil of ellipses inscribing arbitrary convex quadrilaterals In particular the author proves that there is a unique ellipse of maximal area EA and a unique ellipse of minimal eccentricity EI inscribed in Q Similar results are also proven for ellipses passing through the vertices of a convex quadrilateral along with some comparisons with inscribed ellipses Special results are also given for parallelograms Researchers in geometry and applied mathematics will find this unique book of interest Software developers image processors along with geometers mathematicians and statisticians will be very interested in this treatment of the subject of inscribing and circumscribing ellipses with the comprehensive treatment here Most of the results in this book were proven by the author in several papers listed in the references at the end This book gathers results in a unified treatment of the topics while also shortening and simplifying many of the proofs This book also contains a separate section on algorithms for finding ellipses of maximal area or of minimal eccentricity inscribed in or

Condori, Elodie Pozzi, William T. Ross, Alan A. Sola, 2024-04-30 This volume contains the proceedings of the AMS Special Session on Recent Progress in Function Theory and Operator Theory held virtually on April 6 2022 Function theory is a classical subject that examines the properties of individual elements in a function space while operator theory usually deals with concrete operators acting on such spaces or other structured collections of functions These topics occupy a central position in analysis with important connections to partial differential equations spectral theory approximation theory and several complex variables With the aid of certain canonical representations or models the study of general operators can often be reduced to that of the operator of multiplication by one or several independent variables acting on spaces of analytic functions or compressions of this operator to co invariant subspaces In this way a detailed understanding of operators becomes connected with natural questions concerning analytic functions such as zero sets constructions of functions constrained by norms or interpolation multiplicative structures granted by factorizations in spaces of analytic functions and so forth In many cases non obvious problems initially motivated by operator theoretic considerations turn out to be interesting on their own leading to unexpected challenges in function theory The research papers in this volume deal with the interplay between function theory and operator theory and the way in which they influence each other Exercises in Algebra George Edward Atwood, 1909
