Introduction

The DeltaV SIS process safety system has uniquely evolved modular architecture that is based on the Emerson's proven logic solver (PLC) and the proven DeltaV marshalling modules. With the Emerson SIS processing, the DeltaV logic solver and gateway are single hardware. The PLC supports up to 64 individually-configurable channels, allowing flexibility for programming safety instrumented functions and to design specifically the architecture to meet the DeltaV system architecture. Microprocessors are completely reloaded from the channel (PLC) memory to the PLC. Integrated power supply and capacitor are also in the PLC.

The system architecture also supports the operation, provides significant control in system design, installation, and ease of maintenance required from the DeltaV marshalling with the addition of the DeltaV marshalling modules. The modular design and architecture of the DeltaV system and the associated safety instrumented functions are proven and optimized with significant cost savings.

The DeltaV SIS process safety system has the ability to provide a single hardware architecture for the DeltaV SIS, using the power of proven DeltaV technology to increase the reliability of the safety instrumented functions in combination with the advantages of the Emerson DeltaV marshalling modules using the DeltaV SIS architecture.
