

Energy Transfer in Living Organisms

How does energy move through an organism?

Why?

The **law of conservation of energy** states that energy can be neither created nor destroyed; it can only be transferred to another form. In living things energy is transferred as organic matter (molecules of carbohydrate, fats, starch, etc.). But does an organism use all of the energy that is provided by the organic matter available? How is the law of conservation of energy applied to living organisms?

Model 1 – Food Conversion in a Herbivore

1. According to Model 1, how many grams of grass does herbivore A eat each day?
2. Refer to Model 1.
 - a. How much did herbivore A grow from eating this grass?
 - b. What term is used to represent growth in Model 1?
3. What is meant by "egested waste" as it is used in Model 1?
4. Is all of the mass of the ingested grass accounted for in the growth and waste of herbivore A? If not, how much is "missing"? Show a mathematical calculation to support your answer.

Matter and Energy for Growth and Activity Aas,Project 2061,2019 How do our bodies manage to heal wounds build the stamina to run marathons and give us the energy even while we are sleeping to keep us alive and functioning *Matter and Energy for Growth and Activity* prompts high school students to explore fascinating questions like these It takes a new approach to teaching essential ideas about food human body systems matter and energy changes and chemical reactions Developed by a team of scientists and science educators and then tested in classrooms the 14 phenomena based lessons in this book follow a coherent sequence They unfold in two main sections 1 making sense of the matter changes involved in human growth and 2 making sense of the energy changes involved in human growth and activity *Matter and Energy* is unique because it does the following Targets important ideas about changes in both physical and biological systems within the same unit The book first engages students in seeing the usefulness of the ideas in making sense of phenomena in simple physical systems Then it shows how to apply these ideas to make sense of related phenomena in complex biological systems This interdisciplinary approach reflects the way science is practiced in the real world Supports all three dimensions of the Next Generation Science Standards Disciplinary core ideas crosscutting concepts and science practices are all integrated in this unit Emphasizes important relationships between mathematics and science Students interpret data sets and graphs to provide evidence for claims They also do simple computations to explain puzzling phenomena for example why does energy have to be added to ignite a marshmallow even though the burning marshmallow releases lots of energy Builds on the middle school unit *Toward High School Biology* also published by NSTA Press Together the two units help students deepen their understanding of matter and energy changes in plants and animals and the role of chemical reactions in the growth repair and activity of living organisms *Matter and Energy for Growth and Activity* Student Edition provides all the student handouts with the teaching tips and sample answers found in the Teacher Edition removed A set of online resources includes the interactive media videos and handouts required to use these experiential lessons Between both books you have the support you need to help your students turn abstract ideas into applicable knowledge a critical first step in learning Energy Transfer in Ecosystems ,2010 **Introducing Biological Energetics** Norman W. H. Cheetham,2010-10-07 This novel interdisciplinary text presents biological understanding in terms of general underlying principles treating energy as the

overarching theme and emphasizing the all pervading influence of energy transformation in every process both living and non living Key processes and concepts are explained in turn culminating in a description of the overall functioning and regulation of a living cell The book rounds off the story of life with a brief account of the endosymbiotic origins of eukaryotic cells the development of multicellularity and the emergence of modern plants and animals Multidisciplinary research in science is becoming commonplace However as traditional boundaries start to break down researchers are increasingly aware of the deficiencies in their knowledge of related disciplines Introducing Biological Energetics redresses the reciprocal imbalance in the knowledge levels of physical and biological scientists in particular Its style of presentation and depth of treatment has been carefully designed to unite these two readerships
