**Web Based Enterprise Energy and Building Automation Systems** Barney L. Capehart, Lynne C.

Capehart, 2020-12-17 The capability and use of IT and web based energy information and control systems has expanded from single facilities to multiple facilities and organizations with buildings located throughout the world This book answers the question of how to take the mass of available data and extract from it simple and useful information which can determine what actions to take to improve efficiency and productivity of commercial institutional and industrial facilities The book also provides insight into the areas of advanced applications for web based EIS and ECS systems and the integration of IT web based information and control systems with existing BAS systems Understanding Building Automation Systems Reinhold A. Carlson, Robert A. Di Giandomenico, 1991 This book is a response to the growing trend to upgrade existing commercial and industrial buildings for energy savings and improved security Integrated Building Automation Systems provide technology to address these needs The authors describe the major systems in detail together with their components Building Automation Systems and Energy Management P. S. Young, 1991 Automated Energy Management Systems for Small Buildings. Final Report, Volume 1, 1978 Energy controls can perform a valuable function in energy conservation or energy management strategy in buildings While the more simple controls can be applied to virtually any building the more complex automation systems are currently available only to large buildings where their greater costs may be justified At the present however there is a lack of effective automatic energy management control practices and schemes available for application to small buildings This is due in large measure to the absence of cost effective integrated control equipment in the small building marketplace Furthermore a general philosophy or strategy for the application of equipment for total energy conservation in small commercial buildings has not yet evolved Both technical and marketing issues related to the implementation of automation systems in small commercial buildings under 75 000 square feet gross area are explored The functional requirements for small building automation systems are identified and determination of system costs and energy savings potential are made Market analyses identify cost and payback requirements as well as attitudes of potential equipment buyers in the small building market Schools apartments and offices which together consume more than half the energy of the small building market are used as analysis models The market and technical analyses are combined to formulate the potential marketplace for a small building AEMS in terms of building size and building type An AEMS concept is defined which embodies the necessary functional requirements within a framework of applied strategy to energy conservation in buildings
