Eco-service Development Siegfried Behrendt,Christine Jasch,Jaap Kortman,Gabriele Hrauda,Ralf Pfitzner,Daniela Velte,2017-09-08 Sustainable development will not be possible without fundamental improvements in resource productivity and energy efficiency the adaptation of material flows into natural cycles as well as a radical change in production and consumption patterns In essence what is required is not only an ecological approach to product design but also new marketing and consumption patterns for products that can satisfy our needs in a more environmentally sound way In recent years there has been growing interest in the possibilities of eco services to achieve some of these aims Ecologically oriented leasing renting pooling and sharing where the emphasis is placed on the sale of a product s use rather than on the product itself offer great possibilities for innovation and environmental impact reduction At the same time there are opportunities to create new commercial enterprises produce added value to production and distribution functions and therefore create jobs Up until now however there has been little research about the state of the art in eco services how new services can be developed what the attitudes of consumers are to services rather than products and what the consequences of such a structural adjustment would be for firms Eco service Development addresses this lack of

research first by providing a comprehensive inventory and analysis of current eco services in four European countries Germany Austria the Netherlands and Spain It then systematically explores the options open to market participants the potential for environmental impact reduction potential barriers to eco services such as consumer and producer resistance and finally with what political and legal instruments ecologically oriented services can best be promoted The book analyzes eight consumer sectors washing cleaning cooking entertainment gardening do it yourself mobility and leisure time from the point of view of both supply and demand and highlights the optimization potential and development perspectives for commercial new use eco service concepts This book is the most comprehensive analysis yet published of how eco services are being implemented and how they could best be encouraged and contains valuable lessons for policy makers interested businesses and all those in the academic community searching for ways to dematerialize the economy
