**agricultural water management and food security** Food and Agriculture Organization of the United Nations, 2019-03-14 Accessibility to clean and sufficient water resources for agriculture is key in feeding the steadily increasing world population in a sustainable manner Nature Based Solutions NBS offer a promising contribution to enhance availability and quality of water for productive purposes and human consumption while simultaneously striving to preserve the integrity and intrinsic value of the ecosystems Implementing successful NBS for water management however is not an easy task since many ecosystems are already severely degraded and exploited beyond their regenerative capacity Furthermore ecosystems are large and complex and the many stakeholders involved may have conflicting interests Hence implementation of NBS requires a structured and comprehensive approach that starts with the valuation of the services provided by the ecosystem The whole set of use and non use values in monetary terms provides a factual basis to guide the implementation of NBS which is ideally based on transdisciplinary principles i.e. complemented with scientific and case specific knowledge of the ecosystem in an adaptive decision making process that involves the relevant stakeholders This discussion paper evaluated twenty one NBS

case studies using a non representative sample to learn from successful and failed experiences and to identify possible causalities among factors that characterize the implementation of NBS The case studies give a minor role to valuation of ecosystem services an area for which the literature is still developing guidance Less successful water management projects tend to suffer from inadequate factual and scientific basis and uncoordinated or insufficient stakeholder involvement and lack of long term planning Successful case studies point to satisfactory understanding of the functioning of ecosystems and importance of multi stakeholder platforms well identified funding schemes realistic monitoring and evaluation systems and endurance of its promoters

**Greening EU Competition Law and Policy** Suzanne Kingston, 2011-10-27 One of the fundamental challenges currently facing the EU is that of reconciling its economic and environmental policies Nevertheless the role of environmental

protection in EU competition law and policy has often been overlooked Recent years have witnessed a shift in environmental regulation from reliance on command and control to an increased use of market based environmental policy instruments such as environmental taxes green subsidies emissions trading and the encouragement of voluntary corporate green initiatives By bringing the market into environmental policy such instruments raise a host of issues that competition law must address This interdisciplinary treatment of the interaction between these key EU policy areas challenges the view that EU competition policy is a special case insulated from environmental concerns by the overriding efficiency imperative and puts forward practical proposals for achieving genuine integration
