Updated with the latest data from the field, *Environmental Science: Systems and Solutions*, Fifth Edition, explains the concepts and teaches the skills needed to understand multi-faceted and often very complex environmental issues. The authors present the arguments, rebuttals, evidence, and counterevidence from many sides of the debate. [Performance of Cement-Based Materials in Aggressive Aqueous Environments](#) Mark Alexander, Alexandra Bertron, Nele De Belie, 2012-12-18. Concrete and cement-based materials must operate in increasingly aggressive aqueous environments which may be either natural or industrial. These materials may suffer degradation in which ion addition and/or ion exchange reactions occur, leading to a breakdown of the matrix microstructure and consequent weakening. Sometimes this degradation can be extremely rapid and serious, such as in acidic environments, while in other cases degradation occurs

over long periods Consequences of material failure are usually severe adversely affecting the health and well being of human communities and disturbing ecological balances There are also large direct costs of maintaining and replacing deteriorated infrastructure and indirect costs from loss of production during maintenance work which place a great burden on society The focus of this book is on addressing issues concerning performance of cement based materials in aggressive aqueous environments by way of this State of the Art Report The book represents the work of many well known and respected authors who contributed chapters or parts of chapters Four main themes were addressed I Nature and kinetics of degradation and deterioration mechanisms of cement based materials in aggressive aqueous environments II Modelling of deterioration in such environments III Test methods to assess performance of cement based materials in such environments and which can be used to characterise and rate relative performance and inform long term predictions IV Engineering implications and consequences of deterioration in aggressive aqueous environments and engineering approaches to the problem
