**Math to Build On** Anna-Maria Crum, 2011 Have you ever wondered how many years it takes to build a skyscraper Or how many millions of blocks it took to form the pyramids of Egypt Since ancient times people have used the principles of mathematics to help them build remarkable structures Indeed it would have been impossible for the ancient Egyptians to envision and ultimately build the pyramids without the help of good mathematical knowledge The same is true for designers today who build our modern skyscrapers

[Making Presentation Math Computable](#) André Greiner-Petter, 2022-12-31 This Open Access book addresses the issue of translating mathematical expressions from LaTeX to the syntax of Computer Algebra Systems CAS Over the past decades especially in the domain of Sciences Technology Engineering and Mathematics STEM LaTeX has become the de facto standard to typeset mathematical formulae in publications Since scientists are generally required to publish their work LaTeX has become an integral part of today's publishing workflow On the other hand modern research increasingly relies on CAS to simplify manipulate compute and visualize mathematics However existing LaTeX import functions in CAS are limited to simple arithmetic expressions and are therefore insufficient for most use cases Consequently the workflow of experimenting and publishing in the Sciences often includes time consuming and error prone manual conversions between presentational LaTeX and computational CAS formats To address the lack of a reliable and comprehensive translation tool between LaTeX and CAS this thesis makes the following three contributions First it provides an approach to semantically enhance LaTeX expressions with sufficient semantic information for translations into CAS syntaxes Second it demonstrates the first context aware LaTeX to CAS translation framework LaCAST Third the thesis provides a novel approach to evaluate the performance for LaTeX to CAS translations on large scaled datasets with an automatic verification of equations in digital mathematical libraries This is an open access book

*Winning the Math Wars* Martin L. Abbott, Brian Ferriso, Karen Smith, 2011-07-01

Washington State is about to enter a new phase of the math wars. Since the late 1980s, the debate over how best to teach mathematics to schoolchildren has raged worldwide among educators, politicians, and parents. The stakes are high. To operate effectively in a global twenty-first century economy and polity, the United States must provide an education in mathematics that is both excellent and equitable. In this volume, four scholars at the Washington School Research Center (WSRC) at Seattle Pacific University present original research drawn from statistical studies of state educational data and from thousands of classroom observations carried out by The BERC Group. They assess the current state of math education and review its history and development. The authors also provide a dispassionate review of the extensive international and state literature. The in-depth observational research in *Winning the Math Wars* confirms that the real issue is neither the approach to teaching (traditional or reform) nor the type of curriculum. If America's goal of educational equity and excellence is to be achieved, then math teachers everywhere must be fully supported in developing the specific skills that are ideal for educating all students. The authors' discussion focuses on four principles for improving math teaching and learning: fidelity to reform efforts by all involved, an emphasis on instruction and instructional tools, the critical nature of mathematical knowledge, and the need for transformational change. *Winning the Math Wars* is an important book for policy makers, school leaders, practitioners of mathematics education, parents, and anyone who wants to make sense of the math wars.

*Transforming Schools Using Project-Based Learning, Performance Assessment, and Common Core Standards* Bob Lenz, Justin Wells, Sally Kingston, 2015-01-27 It is not what students know but what they do with what they know that is important. Schools are changing in response to this reality and in *Transforming Schools Using Project Based Learning Performance Assessment and Common Core Standards* Bob Lenz, Justin Wells and Sally Kingston draw on the example of the Envision Education schools as well as other leading schools around the country to show how the concept of deeper learning can meet the need for students who are both college and career ready and engaged in their own education. In this book the authors explain how project based learning can blend with Common Core aligned performance assessment for deeper learning. You will discover how many schools have successfully made the transition from traditional teacher centered learning to project based deeper learning and find many practical ideas for implementation. Companion DVD and website include videos showing how to implement deeper learning strategies in the classroom. Evidence based descriptions show why deeper learning is right for students. Performance assessment experts explain how to align assessments with Common Core by shifting the emphasis from knowing to doing. Extensive game plan section provides step by step guidance for change. Schools are complex organizations and transformation involves all of the stakeholders from students to superintendents. But as this book shows there are amazing benefits to be realized when everyone commits to diving deeper into learning.
