Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license [Russian Journal of General Chemistry](#), 1996 **American Civil War** Spencer C.

Global Climatic Catastrophes Michael I. Budyko,Georgi S. Golitsyn,Yuri A. Izrael,2013-11-11 The necessity of eliminating the possibility of a large scale nuclear conflict from the future of mankind is the most important problem of our times There is no doubt that the probable aftereffects of such a conflict would by many times exceed the damage caused by the First and Second World Wars the greatest in history The question of the scale of the damage that would be inflicted upon living nature by nuclear weapons has however not yet been fully clarified It is clear that this damage would not be local i e restricted to destruction in only the places of nuclear explosion As a result of nuclear detonations the atmosphere and hydrosphere would receive many harmful substances including the radioactive waste products of nuclear reactions These substances can be transferred by air flows and water currents over long distances thus considerably increasing the area of harmful influence of nuclear bursts There is no doubt that the indirect effects of nuclear warfare would inflict enormous damage on mankind since the present human society can only exist by a complicated system involving the production of foodstuffs manufactured goods medical supplies etc The destruction of even separate but important links of this system would bring about starvation epidemics and other calamities which would spread to areas not directly involved in the nuclear conflict
