Click Here to Kill Everybody Bruce Schneier, 2018-09-04 Sober lucid and often wise Nature The Internet is powerful but it is not safe As smart devices proliferate the risks will get worse unless we act now From driverless cars to smart thermostats from autonomous stock trading systems to drones equipped with their own behavioral algorithms the Internet now has direct effects on the physical world Forget data theft cutting edge digital attackers can now literally crash your car pacemaker and home security system as well as everyone else's

In Click Here to Kill Everybody best selling author Bruce Schneier explores the risks and security implications of our new hyper connected era and lays out common sense policies that will allow us to enjoy the benefits of this omnipotent age without falling prey to the consequences of its insecurity

Equivalence Amanda L. Golbeck, 2017-04-28

Equivalence Elizabeth L. Scott at Berkeley is the compelling story of one pioneering statistician's relentless twenty year effort to promote the status of women in academe and science Part biography and part microhistory the book provides the context and background to understand Scott's masterfulness at using statistics to help solve societal problems In addition to being one of the first researchers to work at the interface of astronomy and statistics and an early practitioner of statistics using high speed computers Scott worked on an impressively broad range of questions in science from whether cloud seeding actually works to whether ozone depletion causes skin cancer Later in her career Scott became swept up in the academic women's movement She used her well developed scientific research skills together with the advocacy skills she had honed in such activities as raising funds for Martin Luther King Jr and keeping Free Speech Movement students out of jail toward policy making that would improve the condition of the academic workforce for women The book invites the reader into Scott's universe a window of inspiration made possible by the fact that she saved and dated every piece of paper that came across her desk

A Geometric Theory for Hypergraph Matching Peter Keevash, Richard Mycroft, 2014-12-20 The authors develop a theory for the existence of perfect matchings in hypergraphs under quite general conditions Informally speaking the obstructions to perfect matchings are geometric and are of two distinct types space barriers from convex geometry and divisibility barriers from arithmetic lattice based constructions To formulate precise results they introduce the setting of simplicial complexes with minimum degree sequences which is a generalisation of the usual minimum degree condition They

determine the essentially best possible minimum degree sequence for finding an almost perfect matching Furthermore their main result establishes the stability property under the same degree assumption if there is no perfect matching then there must be a space or divisibility barrier This allows the use of the stability method in proving exact results Besides recovering previous results the authors apply our theory to the solution of two open problems on hypergraph packings the minimum degree threshold for packing tetrahedra in graphs and Fischer's conjecture on a multipartite form of the Hajnal Szemerédi Theorem Here they prove the exact result for tetrahedra and the asymptotic result for Fischer's conjecture since the exact result for the latter is technical they defer it to a subsequent paper

Mathematical Reasoning: The History and Impact of the DReaM Group Gregory Michaelson, 2021-11-20 This collection of essays examines the key achievements and likely developments in the area of automated reasoning In keeping with the group ethos Automated Reasoning is interpreted liberally spanning underpinning theory tools for reasoning argumentation explanation computational creativity and pedagogy Wider applications including secure and trustworthy software and health care and emergency management The book starts with a technically oriented history of the Edinburgh Automated Reasoning Group written by Alan Bundy which is followed by chapters from leading researchers associated with the group Mathematical Reasoning The History and Impact of the DReaM Group will attract considerable interest from researchers and practitioners of Automated Reasoning including postgraduates It should also be of interest to those researching the history of AI

Non Linear Mathematics Vol. I Thomas L., Saaty, Joseph, Bram, 2014-12-22 We are surrounded and deeply involved in the natural world with non linear events which are not necessarily mathematical the authors write For example the nonlinear problem of pedalling a bicycle up and down a hillside On a grand scale the struggle for existence between two species one of which preys exclusively on the other This book is for mathematicians and researchers who believe that nonlinear mathematics is the mathematics of today it is also for economists engineers operations analysts the reader who has been thus bemused into an artificially linear conception of the universe Nonlinear Mathematics is the first attempt to consider the widest range of nonlinear topics found in the scattered literature Accessible to non mathematics professionals as well as college seniors and graduates it offers a discussion both particular and broad enough to stimulate research towards a unifying theory of nonlinear mathematics Ideas are presented according to existence and uniqueness theorems characterization e.g stability and asymptotic behavior construction of solutions convergence approximation and errors

Abraham Robinson Joseph Warren Dauben, 2014-07-14 One of the most prominent mathematicians of the twentieth century Abraham Robinson discovered and developed nonstandard analysis a rigorous theory of infinitesimals that he used to unite mathematical logic with the larger body of historic and modern mathematics In this first biography of Robinson Joseph Dauben reveals the mathematician's personal life to have been a dramatic one developing his talents in spite of war and ethnic repression Robinson personally confronted some of the worst political troubles of our times With the skill and expertise familiar to readers of Dauben's earlier works the book combines an

explanation of Robinson's revolutionary achievements in pure and applied mathematics with a description of his odyssey from Hitler's Germany to the United States via conflict ridden Palestine and wartime Europe Robinson was born in Prussia in 1918 As a boy he fled with his mother and brother Saul to Palestine A decade later he narrowly escaped from Paris as the Germans invaded France Having spent the rest of World War II in England at the Royal Aircraft Establishment in Farnborough he began his teaching career at the Royal College of Aeronautics Subsequently he moved to universities in Canada Israel and finally the United States A joint appointment in mathematics and philosophy at UCLA led to a position at Yale University where Robinson served as Sterling Professor of Mathematics until his untimely death at the age of fifty five Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 *Special Values of the Hypergeometric Series* Akihito Ebisu, 2017-07-13 In this paper the author presents a new method for finding identities for hypergeometric series such as the Gauss hypergeometric series the generalized hypergeometric series and the Appell Lauricella hypergeometric series Furthermore using this method the author gets identities for the hypergeometric series and shows that values of at some points can be expressed in terms of gamma functions together with certain elementary functions The author tabulates the values of that can be obtained with this method and finds that this set includes almost all previously known values and many previously unknown values

Feb Mar 2014 Mathematics Paper 1 Memorandum Book Review: Unveiling the Magic of Language

In an electronic era where connections and knowledge reign supreme, the enchanting power of language has become much more apparent than ever. Its power to stir emotions, provoke thought, and instigate transformation is truly remarkable.
