**Quantum Systems under Gravitational Time Dilation** Magdalena Zych, 2017-02-06 This thesis introduces a new theoretical tool to explore the notion of time and temporal order in quantum mechanics the relativistic quantum clock framework It proposes novel thought experiments showing that proper time can display quantum features e g when a clock runs different proper times in superposition The resulting new physical effects can be tested in near future laboratory experiments with atoms molecules and photons as clocks The notion of time holds the key to the regime where quantum

theory and general relativity overlap which has not been directly tested yet and remains largely unexplored by the theory The framework also applies to scenarios in which causal relations between events become non classical and which were previously considered impossible to address without refuting quantum theory The relativistic quantum clock framework offers new insights into the foundations of quantum theory and general relativity *Quantum Information Meets Quantum Matter* Bei Zeng,Xie Chen,Duan-Lu Zhou,Xiao-Gang Wen,2019-03-28 This book approaches condensed matter physics from the perspective of quantum information science focusing on systems with strong interaction and unconventional order for which the usual condensed matter methods like the Landau paradigm or the free fermion framework break down Concepts and tools in quantum information science such as entanglement quantum circuits and the tensor network representation prove to be highly useful in studying such systems The goal of this book is to introduce these techniques and show how they lead to a new systematic way of characterizing and classifying quantum phases in condensed matter systems The first part of the book introduces some basic concepts in quantum information theory which are then used to study the central topic explained in Part II local Hamiltonians and their ground states Part III focuses on one of the major new phenomena in strongly interacting systems the topological order and shows how it can essentially be defined and characterized in terms of entanglement Part IV shows that the key entanglement structure of topological states can be captured using the tensor network representation which provides a powerful tool in the classification of quantum phases Finally Part V discusses the exciting prospect at the intersection of quantum information and condensed matter physics the unification of information and matter Intended for graduate students and researchers in condensed matter physics quantum information science and related fields the book is self contained and no prior knowledge of these topics is assumed *MATLAB for Neuroscientists* Pascal Wallisch,Michael E. Lusignan,Marc D. Benayoun,Tanya I. Baker,Adam Seth Dickey,Nicholas G.

Hatsopoulos,2010-07-28 *MATLAB for Neuroscientists* An Introduction to Scientific Computing in MATLAB is the first comprehensive teaching resource and textbook for the teaching of MATLAB in the Neurosciences and in Psychology MATLAB is unique in that it can be used to learn the entire empirical and experimental process including stimulus generation experimental control data collection data analysis and modeling Thus a wide variety of computational problems can be addressed in a single programming environment The idea is to empower advanced undergraduates and beginning graduate students by allowing them to design and implement their own analytical tools As students advance in their research careers they will have achieved the fluency required to understand and adapt more specialized tools as opposed to treating them as black boxes Virtually all computational approaches in the book are covered by using genuine experimental data that are either collected as part of the lab project or were collected in the labs of the authors providing the casual student with the look and feel of real data In some cases published data from classical papers are used to illustrate important concepts giving students a computational understanding of critically important research The first comprehensive textbook on MATLAB with a

focus for its application in neuroscience Problem based educational approach with many examples from neuroscience and cognitive psychology using real data Authors are award winning educators with strong teaching experience **The American Catalogue** ,1891
