homologous chromosomes until the time they are separated at anaphase I Recombination also serves to increase genetic diversity from one generation to the next by breaking up linkage groups The unique chromosome dynamics of meiosis have fascinated scientists for well over a century but in recent years there has been an explosion of new information about how meiotic chromosomes pair recombine and are segregated Progress has been driven by advances in three main areas 1 genetic identification of meiosis defective mutants and cloning of the genes involved 2 development of direct physical assays for DNA intermediates and products of recombination and 3 increasingly sophisticated cy logical methods that describe chromosome behaviors and the spatial and temporal patterns by which specific proteins associate with meiotic chromosomes

Study of Meiosis Himanshu Gupta,2013-01 Reductional nature of meiosis is responsible to maintain the ploidy in eukaryotes In sexual reproduction Meiotic division produces gametes of half ploidy and fertilization restores original chromosome number In the meiosis sister chromatids are monoorientated which leads to separation of homologous chromosomes This is followed by separation of sister chromatid in meiosis II because of biorientation of sister chromatids Comparison of meiosis with mitosis reveals that monoorientation of sister chromatids is the main reason for halving the ploidy According to the present hypothesis Monopolin complex A four subunit complex directs monopolar attachment of sister chromatids Present study is done to reveal the nature and function of this complex Cell cycle arrest mutants were created and verified to maximize the number of cells at particular stage by deleting or shuffling the promoter of a particular gene Then Csm1 subunit of monopolin complex was affinity tagged and verified in arrested cells As future prospects of this work affinity purification of Csm1 can be done Comparison of protein profiles obtained will help to reveal the functional properties of monopolin complex
