Like its predecessor, this volume provides a taxonomy of the field and an annotated survey of publications, research centers, text archives, and termbanks, electronic communications software, and hardware relevant to the humanities. It also includes special larger entries for important software that offer up to date information and practical help in applying that information to research projects and instruction in colleges and universities. For the 1989-1990 edition, Lancashire has for the first time appointed an international advisory board of specialists to assist in discovering, assembling, and evaluating materials for inclusion, and to keep up with the rapidly developing nature of the field and its international constituency. Lancashire has included many completely new or revised sections, including a major new chapter on computing in Law. A monumental work of current and enduring value. The Humanities Computing Yearbook will prove invaluable to a wide range of students, teachers, and researchers in humanities and social sciences, computational linguistics, and related fields in computer science.
