Types of Mammals

Mammals are classified into three different types: Marsupials, Placental, and Monotremes.

Directions: Research and name different animals that would fit each type of mammal group.

Marsupials: Found commonly in the Southern Hemisphere, the females marsupials carry their young in pouches. When the offspring is born, it is relatively underdeveloped and stays in the pouch to continue development until a certain age.

Placental Mammals: Describing most mammals, placental mammals nourish their babies in the female's uterus through a special embryonic organ called a placenta.

Monotremes: Monotremes are mammals that lay eggs instead of giving birth to live young. Most are extinct; the only surviving monotremes being native to Australia and New Guinea.

All mammals feed their children milk produced through the mother's mammary glands.
