Mammalogy 5th Edition:

Mammalogy George A. Feldhamer, Lee C. Drickamer, Stephen H. Vessey, Joseph F. Merritt, Carey Krajewski, 2015-01-01

Reflecting the expertise and perspective of five leading mammalogists the fourth edition of *Mammalogy* Adaptation Diversity Ecology significantly updates taxonomy includes a new chapter on mammalian molecular phylogenetics and highlights several recently described species There are close to 5 500 species in the class Mammalia including the blue whale the largest animal that has ever lived and the pygmy shrew which weighs little more than a penny The functional diversity of mammals has allowed them to play critical roles in every ecosystem whether marine freshwater alpine tundra forest or desert Many mammal species are critically endangered and present complex conservation and management challenges This book touches on those challenges which are often precipitated by overharvesting and habitat loss as well as emerging threats such as the impact of wind turbines and white nose syndrome on bats and chronic wasting disease on deer Among the updates and additions to the fourth edition of *Mammalogy* are numerous new photos figures and cladograms over 4 200 references as well as A completely new chapter on mammalian phylogeny and genomics Current taxonomy including major changes to orders suborders and superfamilies of bats and rodents An explanation of the recent inclusion of whales with terrestrial even toed ungulates Updates on mammalian structural functional adaptations and fossil history recent advances in our understanding of phylogeny biogeography social behavior and ecology A discussion of two new orders and thirteen newly recognized extant families Reflections on the implications of climate change for mammals Thorough examinations of several recently described species including Durrell's vontsira *Salanoia durrelli* and the Laotian rock rat *Laonastes aenigmamus* An explanation of mammalian biomechanics such as that seen in lunge feeding of baleen whales Breakout boxes on unique aspects of mammals including the syntax of bat songs singing mice and why there are no green mammals unless we count algae covered sloths Maintaining the accessible readable style for which Feldhamer and his coauthors are well known this new edition of *Mammalogy* is the authoritative textbook on this amazingly diverse class of vertebrates

Mammalogy George A. Feldhamer, 2007-09-07 The Class Mammalia is amazingly diverse ranging from whales to marsupials to bats to primates The more than 5 400 species occupy many habitats with mammals present on all the continents They are rare only on Antarctica and a few isolated islands Mammals present a complex set of conservation and management issues Some species have become more numerous with the rise of human populations while others have been extirpated or nearly so such as the Caribbean monk seal the thylacine the Chinese river dolphin and the Pyrenean ibex In this new edition of their classic textbook George A. Feldhamer and his colleagues cover the many aspects of mammalogy Thoroughly revised and updated this edition includes treatments of the most recent significant findings in ordinal level mammalian phylogeny and taxonomy special topics such as parasites and diseases conservation and domesticated mammals interrelationships between mammalian structure and function and the latest molecular techniques used to study mammals

Merritt, Carey Krajewski, Janet L. Rachlow, Kelley M. Stewart, 2020-03-24 A completely revised and updated edition of the leading mammalogy textbook featuring color photographs throughout and a new streamlined structure for enhanced use in courses. There are more than 6,400 species in the class Mammalia including the blue whale, the largest animal that has ever lived, and the pygmy shrew, which weighs little more than a dime. Such diversity among mammals has allowed them to play critical roles in every ecosystem, whether marine, freshwater, alpine, tundra, forest, or desert. Reflecting the expertise and perspective of five leading mammalogists, the fifth edition of *Mammalogy: Adaptation, Diversity, Ecology* significantly updates taxonomy, adds a new introductory chapter on the science of mammalogy, and highlights several recently described species. To enhance its appeal to students, textual material has been reduced, consolidated, and streamlined without sacrificing breadth or depth of coverage. The fifth edition includes, for the first time, stunning color photographs throughout, chapters rearranged and grouped to best reflect phylogenetic relationships, with updated numbers of genera and species for each family, updated mammalian structural and functional adaptations, as well as ordinal fossil histories, recent advances in mammalian phylogeny, biogeography, social behavior, and ecology, with 12 new or revised cladograms reflecting current research findings, new breakout boxes on novel or unique aspects of mammals, new work on female post-copulatory mate choice, cooperative behaviors, group defense, and the role of the vomeronasal system, discussions of the current implications of climate change and other anthropogenic factors for mammals. Maintaining the accessible, readable style for which Feldhamer and his coauthors are well known, this new edition of *Mammalogy* is the authoritative textbook on this amazingly diverse class of vertebrates. Mammalogy George A. Feldhamer, 1999 This introductory text assumes a basic background in zoology or vertebrates. It covers taxonomy, research, discoveries, and techniques, parasites, domestication, and conservation. *MAMMALOGY FIFTH EDITION*. TERRY A. VAUGHAN, *Mammalogy* Terry Vaughan, James Ryan, Nicholas Czaplewski, 2011-04-21 Newly revised and extensively updated, the fifth edition of *Mammalogy* explains and clarifies the subject of mammalian biology as a unified whole, taking care to discuss the latest and most fascinating discoveries in the field. In recent years, we witnessed significant changes in the taxonomy of mammals. The authors kept pace with such changes and revised each chapter to reflect the most current data and statistics available. New pedagogical elements, including chapter outlines, lists of key morphological characteristics, and further reading sections, help readers grasp the most important concepts and explore additional content on their own. Book Jacket. *Journal of Mammalogy*, 1922 **Encyclopedia of Caves and Karst Science** John Gunn, 2004-08-02 The *Encyclopedia of Caves and Karst Science* contains 350 alphabetically arranged entries. The topics include cave and karst geoscience, cave archaeology, and human use of caves, art in caves, hydrology, and groundwater, cave and karst history, and conservation and management. The *Encyclopedia* is extensively illustrated with photographs, maps, diagrams, and tables, and

has thematic content lists and a comprehensive index to facilitate searching and browsing *Bios & Ten Pulses of Evolution* Michael A. Susko, 2025-07-31 BIOS Ten Pulses of Evolution Paired Literary Scientific Visions From First Life to First Humans The journey continues In this second book of Beyond and a New World Zoe and Tod awaken within the great unfolding of life itself No longer just observers they become part of the story inhabiting the forms life takes as it rises from the depths faces crisis and adapts to new worlds From the first daring steps onto land to the forging of consciousness itself they experience the wonder the struggle and the mystery of becoming But where does the journey end As myth and evolution intertwine they move toward a revelation that will change everything Alongside this epic narrative stands Ten Pulses of Evolution a revelatory journey through life's 4 billion year history not as a standard linear march of textbook timelines but through a logarithmic framework where each major pulse of life occurs at half the distance to the present From the origin of life to the dawn of humanity this model uncovers a remarkable pattern evolution proceeds in regular pulses each marking profound leaps in complexity mobility and consciousness Using accessible mathematics and rich evidence from biology paleontology and molecular research this work shows how each node at 4 2 1 billion years ago and beyond ushers in a new grade of life Striking intervals emerge each leap follows a precursor phase of uncertainty a transformative midpoint Major Node and a confirming aftermath explicit period More than a timeline Ten Pulses of Evolution offers a map of life's deep rhythm a framework for understanding how life expands toward greater freedom interiority and connection For those open to wonder it is also a meditation on life's invisible drive toward novelty toward sentience and perhaps toward love Come trace evolution's pulses and glimpse what may still lie ahead [Ten Pulses of Evolution](#) Michael A. Susko, 2020-05-04 This work offers a novel way to map evolutionary time from life's origin to the first humans Rather than using a traditional linear scale in which events bunch up toward the end a logarithmic scale is employed that expands our resolution as we come to the present Such a scale allows us to detect patterns that would otherwise be invisible and arrange evolutionary events in memorable fashion The basic concept of logarithms is not complicated as we will simply halve units as we move from the past to the present in order to highlight major evolutionary change Thus we find the start of life to be approximately four billion years ago the nucleated cell at two billion years ago complex multicellularity at one billion years ago and so on Remarkably we find the major events of evolution along with the certainty of supporting evidence to be pulsed with logarithmic regularity This chart also reveals that each Major Node represents change in three major arenas making for significant leaps in consciousness gains in mobility and increased social connectivity Come take this evolutionary journey and discover the surprising pattern of logarithmic time with changes that would seem to have no end **The Unfolding of Time** Michael A. Susko, 2025-05-01 The Unfolding of Time A Logarithmic Model for Astronomical Biological and Cultural Evolution presents a unifying framework for understanding complexity across cosmic biological and cultural domains Rather than treating the history of the universe as a linear sequence of disconnected events this work proposes that major evolutionary thresholds from the

formation of galaxies and rocky planets to the emergence of life and symbolic culture follow a rhythmic pattern when plotted on a logarithmic timescale Drawing on current astronomical research evolutionary biology and anthropological insight the model suggests that complexity emerges in distinct pulses each nested within a broader unfolding This interdisciplinary synthesis invites a rethinking of time s structure not as a flat continuum but as a layered rhythm of transformation The result is a compelling vision of the universe s evolution in which deep regularities shape the appearance of novelty across scales
